INDEX TO THE SPECIES OF THE FAMILY RHYNCHODEMIDAE (TURBELLARIA, TRICLADIDA, TERRICOLA)^{1,2)}

PART I: RHYNCHODEMINAE

by

ROBERT E. OGREN and MASAHIARU KAWAKATSU

SYNTHETIC INTRODUCTION TO TAXONOMY

A. HISTORICAL BACKGROUND TO THE FAMILY, SUBFAMILIES AND GENERA.

In relating historical development for the family Rhynchodemidae VON GRAFF, 1896, it is helpful to remember that the present system of two subfamilies arose slowly. There also has been confusion of definitions, especially for the genus *Rhynchodemus* LEIDY, 1851, as proposed by HEINZEL (1929). Rejection of various proposed classification schemes has occurred and no one scheme has been fully accepted. Our present Index records changes in names since VON GRAFF's (1899) work was published. As more complete knowledge is obtained about this interesting group of planarians, a new improved classification will emerge that represents biological principles and will assist classification of new forms.

The family Rhynchodemidae was introduced by VON GRAFF (1896, and also in 1899) for land planarians with two eyes near the anterior of the body, without tentacles or suckers and lacking a broad head plate. He included the following genera: *Rhynchodemus* LEIDY, 1851; *Platydemus* VON GRAFF, 1896; *Dolichoplana* MOSELEY, 1877; *Amblyplana* VON GRAFF, 1896; *Microplana* VEJDOKSKÝ, 1890; *Othelosoma* GRAY, 1869; and *Nematodemus* VON GRAFF, 1896. The genus *Cotyloplana* SPENCER, 1892, having anterior sucker-like secretory areas, was placed in its own family Cotyloplanidae VON GRAFF, 1896.

In VON GRAFF's (1899) classic monograph, he provided morphological and systematic foundations for all future work. Of particular value from a taxonomic standpoint was the descriptions of species, keys to genera and species, systematic summaries and outline of geographical

-
- 1) Part of this study was presented at the Fifth International Symposium on the Biology of Turbellaria held at Göttingen, on August 9-14, 1987. Cf. OGREN's abstract entitled "Genera of the land planarian family Rhynchodemidae" (FISBT Abstracts, p. 91).
 - 2) This paper is affectionately dedicated to the late Dr. Roman KENK who passed away on November 14, 1988, at Cupertino, California, U.S.A. He would have been 90 on November 25th. The deceased was recognized as the leading authority on turbellariology and was a respected friend of the authors. Sadly, Dr. (Mrs.) KENK (Ada) died shortly afterward (October 2) and now Roman has followed. Pray for the repose of souls of Dr. and Mrs. Roman KENK.

distributions. He (1899, pp. 84-85) indicated in his phylogenetic diagram there were two morphological groups in the Rhynchodemidae. He divided the genus *Rhynchodemus* into two groups of species, based on external features and musculature, consisting of outer circular and inner longitudinal layers, as well as parenchymal fibers.

Group A. Subepithelial longitudinal muscle layer is weak consisting of a single layer of separate fibers, whereas the parenchymal longitudinal bundles are strongly developed (*e. g. Rhynchodemus terrestris*).

Group B. Subepithelial longitudinal muscle layer is strong consisting of large, well-developed bundles, whereas the weak parenchymal longitudinal system is either sparse and loosely distributed or lacking completely (*e. g. Rhynchodemus sylvaticus*).

Although VON GRAFF (1899) realized that grouping of species around common anatomical features such as the above was possible within the Rhynchodemidae, he did not introduce subsfamilies. In his final definitive treatise prepared for BRONN's Klassen und Ordnungen des Tier-reichs (VON GRAFF, 1912-1917), provided an annotated bibliography, revised summary of knowledge, revised generic definitions and another taxonomic key to the genera.

As new unusual land planarians were described investigators continued to introduce new genera and even families. The genus *Pseudartiocotylus*, was proposed by IKEDA (1911), for the single species *Pseudartiocotylus ceylonicus* which had an apical sense organ. However, insufficient information has prevented satisfactory placement of the genus into a scheme of classification. In 1926, the new family Digonopylidae FISCHER was proposed for the genus *Digonopyla* FISCHER, 1926, with a single peculiar species, *Digonopyla harmeri* (VON GRAFF, 1899) (*olim Dolichoplana harmeri*), which had separate external male and female gonopores, and was unique in having multiple mouths and pharynges.

The important work of MEIXNER (1928) on the reproductive organs of triclad planarians added further understanding to the morphology, phylogeny, ecology, and distribution of these animal groups. In his summary for copulatory organs of land triclads (Tricladida, Terricola), MEIXNER (*op. cit.*) observed in the Rhynchodemidae that those species with a penis papilla also frequently had a seminal bursa as in the marine triclads (Tricladida, Maricola). On the basis of copulatory organs, he described three groups in the Rhynchodemidae: In groups A & B there is a well-developed penis papilla and seminal bursa; in group C the penis papilla is absent, or greatly reduced, and the seminal bursa is lacking. Although these conclusions were not part of a new classification, they did emphasize correlation of copulatory organ morphology with other features.

The comprehensive work of HEINZEL (1929) made a significant step toward a new classification. (Unfortunately, his definitions of *Rhynchodemus* and Rhynchodeminae were opposite of the ones used today.) He provided a redescription and revision of the Rhynchodemidae with delineation of two subfamilies: Rhynchodeminae HEINZEL, 1929 (including genera *Rhynchodemus* LEIDY, 1851, after HEINZEL, *Artiocotylus* VON GRAFF, 1896, and *Pseudartiocotylus* IKEDA, 1911) and the subfamily Desmorrhynchinae HEINZEI, 1929 (including genera *Desmorrhynchus* HEINZEL, 1929, as a new genus, *Dolichoplana* MOSELEY, 1877, and *Platydemus* VON GRAFF, 1896). The Rhynchodeminae (which today we call Microplaninae !) he defined as having weak subepithelial musculature (Hautmuskelschlach); with no enlarged development of longitudinal fibers; a well-developed penis was present. The Desmorrhynchinae (which today we call Rhynchodeminae !) he stated had powerful subepithelial musculature consisting of large longitudinal bundles; the penis papilla was generally absent (except for the reduced condition in many species of the genus *Platydemus*).

The above-mentioned classification by HEINZEL (1929) was adopted and used by BRESSLAU

(1933). However, while the concept of two subfamilies was accepted, HEINZEL's (1929) terminology has not been adopted by major taxonomists. This has led to some confusion. The family *Cotyloplanidae* VON GRAFF, 1896, was merged into the *Rhynchodemidae* by DE BEAUCHAMP (1933, p. 117, see also 1939, p. 334) as the result of describing a new species of *Cotyloplana*, because he believed that the presence of the cephalic adhesive organ was not in itself sufficient reason for establishing a separate family.

The new genus *Diporodemus* was introduced by HYMAN (1938) for *Diporodemus yucatani* which, in addition to the common genital pore, had a second external opening, the bursal pore, arising from the exit duct of the enlarged seminal bursa of the female organ. The male organ had a well-developed penis papilla. She described how this was not the same condition as found in *Digonopyla harmeri* which had separate external gonopores for male and female organs.

A new revised classification was next proposed by HYMAN (1943). She recognized two subfamilies defined according to HEINZEL (1929): 1) The subfamily *Dolichoplaninae* HYMAN, 1943, a new name (= *Desmorphynchinae* HEINZEL, 1929), included species having strong subepithelial longitudinal musculature as typified by *Rhynchodemus sylvaticus*; 2) The subfamily *Geodesminae* HYMAN, 1943, a new name (= *Rhynchodeminae* HEINZEL, 1929), included species having weak longitudinal musculature as typified by *Geodesmus terrestris*. She demonstrated that *Rhynochodemus sylvaticus* is the correct type species of the genus *Rhynchodemus* LEIDY, 1851, and not *Rhynchodemus terrestris* as erroneously used by HEINZEL (1929). And thus, *Desmorphynchus* HEINZEL, 1929, became a synonym of *Rhynchodemus*. For this reason, it was not appropriate to use the name *Desmorphynchinae*. Because of these nomenclatural problems HYMAN (*op. cit.*) believed it was better to introduce new subfamily names. However, following publication HYMAN (1954) realized that *Dolichoplaninae* could not be used since according to the International Code of Zoological Nomenclature (cf. ICZN, 3rd Ed., Art. 29 (a)); the type genus should be used as the word root for the family name and one of the subfamilies must have the same word root as the family, *viz.*, *Rhynchodeminae*. HYMAN (1954, p. 18), remarked that she realized her mistake and personally wrote in "Rhynchodeminae" as her correction of the reprint sent to Dr. CORRÊA of São Paulo. However, it was CORRÊA (1947), who carefully reviewed the historical changes which established the subfamily and HYMAN (*op. cit.*) graciously ascribed the correct usage of the *Rhynchodeminae* to Dr. CORRÊA. The two subfamilies delineated by HYMAN (1943) and CORRÊA (1947) were as follows: 1) Subfamily *Rhynchodeminae* CORRÊA, 1947 (genera: *Rhynchodemus* LEIDY, 1851 (= *Desmorphynchus* HEINZEL, 1929), *Dolichoplana* MOSELEY, 1877, and *Platydemus* VON GRAFF, 1896); 2) subfamily *Geodesminae* HYMAN, 1943 (= *Rhynchodeminae* HEINZEL, 1929) (genera: *Geodesmus* MECZNIKOW, 1866, *Artiocotylus* VON GRAFF, 1896, *Pseudartiocotylus* IKEDA, 1911, and *Diporodemus* HYMAN, 1938). HYMAN (1943) selected the genus *Geodesmus*, although its type species, *Geodesmus bilineatus*, was erroneously considered at the time to possess a penis papilla and have weak subepidermal musculature. It remained for CORRÊA (1947), followed later by PRUDHOE (1949) to introduce corrections of the two subfamilies, but both accepted the *Geodesminae*.

In the significant study by PANTIN (1950) it was shown that *Geodesmus bilineatus* did not have a penis papilla but was congeneric with *Rhynchodemus sylvaticus*, therefore, *Geodesmus* became a synonym of *Rhynchodemus*. Careful anatomical and systematic analyses by PANTIN (1953) introduced a more correct classification, leading the way for change. PANTIN (*op. cit.*) demonstrated that *Nematodemus lumbrioides* VON GRAFF, 1899 (a new genus and a new species VON GRAFF placed in the family *Rhynchodemidae*) was a Nemertean and not a Turbellarian, thus removing the genus and species from the family. He concluded that the genus *Microplana*, with the type of *Microplana humicola* VEJDOKSKÝ, 1890, was taxonomically available. For this reason he recommended that

Microplana now include the well-known species *Rhynchodemus terrestris* (MÜLLER, 1774) (*olim Fasciola terrestris*) and other similar species; and also concluded that the genera *Amblyplana* VON GRAFF, 1896, and *Artiocotylus* VON GRAFF, 1896, were junior synonyms of the genus *Othelosoma* GRAY, 1869. PANTIN (1953) proposed the following scheme of classification with two subfamilies: Subfamily 1: Rhynchodeminae CORRÉA, 1947: possession of strong subepithelial longitudinal muscle (genera: *Rhynchodemus* LEIDY, 1851, *Dolichoplana* MOSELEY, 1877, and *Platydemus* VON GRAFF, 1896); and subfamily 2: Microplaninae PANTIN, 1953: possession of weak subepithelial longitudinal muscle and penis papilla (genera: *Microplana* VEJDOKSKÝ, 1890, *Othelosoma* GRAY, 1869 (= *Artiocotylus* VON GRAFF, 1896; = *Amblyplana* VON GRAFF, 1896, in part), *Pseudartiocotylus* IKEDA, 1911, and *Diporodemus* HYMAN, 1938).

A new genus *Incapora* was introduced by DU BOIS-REYMOND MARCUS (1953) for a new species *Incapora weyrauchi* having ventral orifices leading from the gut. It was distinguishable from the genus *Digonopyla* FISCHER, 1926, because it lacked multiple pharynges, and from the genus *Diporodemus* HYMAN, 1938, because the additional pores were connected to the intestine and were not considered gonopores.

A revised classification was presented by HYMAN (1954) based on PANTIN (1953) to which was added under the Microplaninae the new genus *Orthodemus* HYMAN, 1954, for microplanid worms having a well-developed seminal bursa. She recognized the subfamily Rhynchodeminae CORRÉA, 1947 (genera: *Rhynchodemus* LEIDY, 1851, *Dolichoplana* MOSELEY, 1877, and *Platydemus* VON GRAFF, 1896); subfamily Microplaninae PANTIN, 1953 (genera: *Microplana* VEJDOKSKÝ, 1890, *Orthodemus* HYMAN, 1954 (type species: *Fasciola terrestris* MÜLLER, 1774), *Diporodemus* HYMAN, 1938, *Othelosoma* GRAY, 1869, and *Pseudartiocotylus* IKEDA, 1911).

A brief systematic review of the family Rhynchodemidae was done by DE BEAUCHAMP (1961, p. 117). Finally the new genus *Geobenazzia* was introduced by MINELLI (1974) with a new species *Geobenazzia tyrrhenica* as the type species having an adenodactyle in the male copulatory organ. A key paper reviewing the taxonomic status of terrestrial planarians of Europe was contributed by MINELLI (1977). He did not discuss HYMAN's (1954) classification using the genus *Orthodemus* hence, the old species *Fasciola terrestris* was retained in *Microplana* as suggested by PANTIN (1953). In their consideration of British planarians, BALL & REYNOLDSON (1981), utilized the subfamilies Rhynchodeminae CORRÉA, 1947, and Microplaninae PANTIN, 1953, but did not accept the genus *Orthodemus*. Several other investigators have been unwilling to recognize the validity of *Orthodemus* (cf. DE BEAUCHAMP, 1958, 1961; DU BOIS-REYMOND MARCUS, 1957; OGREN, 1984).

KAWAKATSU (1986) summarized both subfamilies in the Rhynchodemidae and their associated genera as follows: subfamily Rhynchodeminae (genera: *Rhynchodemus* LEIDY, 1851, *Dolichoplana* MOSELEY, 1877, *Platydemus* VON GRAFF, 1896, *Cotyloplana* SPENCER, 1892, and *Digonopyla* FISCHER, 1926); subfamily Microplaninae (genera: *Microplana* VEJDOKSKÝ, 1890, *Othelosoma* GRAY, 1869, *Pseudartiocotylus* IKEDA, 1911, *Diporodemus* HYMAN, 1938, *Incapora* DU BOIS-REYMOND MARCUS, 1953, and *Geobenazzia* MINELLI, 1974). He did not adopt the genus *Orthodemus* HYMAN, 1954.

A review of genera of the family Rhynchodemidae was presented by OGREN (1987) in poster sessions of the Fifth International Symposium on the Biology of Turbellaria held in Göttingen (August 9-14, 1987), and parts of the present introduction have developed from that material.

The status of classification in the Rhynchodemidae was made uncertain as the result of the publication of two articles by HASLAUER-GAMISCH (1981, 1982), in which two new families were introduced (Myriopharyngidae and Platydemidae) the validity of which was not sufficiently set forth. Our present judgement based only on the published accounts, is that both families are not valid. In

the "Myriopharyngidae" new family, the single new species *Myriopharynx tetracelis* HASLAUER-GAMISCH, 1981, with multiple mouths and pharynges appears to belong in the genus *Digonopyla* FISCHER, 1926, although sexual organs are unknown. The four new species of HASLAUER-GAMISCH (1982) (*Platydemus quadrilineatus*, *Platydemus renschi*, *Platydemus sumbawaeiensis*, and *Elattodemus steinböckii* as a new genus and new species) placed in the "Platydemidae" new family, are believed to belong in the family Geoplanidae STIMPSON, 1857, because of the presence of multiple eyes, and may belong to the genus *Caenoplana* MOSELEY, 1877³⁾, or *Kontikia* FROEHLICH, 1955, because of ventral testes.

B. TAXONOMIC REVIEW OF THE GENERA.

The division of Rhynchodemidae into two distinct subfamilies greatly clarified the classification of species. However, description and systematics are difficult because comprehensive analysis of genera has not been undertaken. This is in part due to the following reasons: 1) the limited number of study specimens available, and absence in some cases of type material especially for those species described before 1900; 2) very few specimens collected will be in sexual maturity; 3) one may not always be able to return to a geographic location and collect land planarians previously reported to be present; 4) there are relatively few zoologists currently studying land planarians; 5) original description of a new species was frequently given only by external features of animals (turbellariologists should discard this old non-scientific practice which is still employed by some scholars today).

Perhaps this Index can serve to initiate such a comprehensive effort and will encourage other zoologists to develop taxonomic studies.

Some genera have been subjected to review and the land planarian species removed to other more correct genera, e. g., *Fasciola* LINNÉ, 1758, and *Planaria* MÜLLER, 1776. Other genera have been declared synonyms, e. g., *Geodesmus* MECZNIKOW, 1866, and *Artiocotylus* VON GRAFF, 1896, are junior synonyms of *Microplana* VEJDOKSKÝ, 1890; and *Desmorphynchus* HEINZEL, 1929, is a junior synonym of *Rhynchodemus* LEIDY, 1851; while *Pseudoartiocotylus* by BRESSLAU (1933) and *Parartiocotylus* by MINELLI (1974) are junior synonyms of *Pseudartiocotylus* IKEDA, 1911. *Orthodemus* HYMAN, 1954, is now a junior synonym of *Microplana*.

Recent new genera (*Myriopharynx* and *Elattodemus*) proposed by HASLAUER-GAMISCH (1981, 1982) are still being evaluated. However, the synonyms used in the present Index are as follows: *Myriopharynx* is considered a junior synonym of *Digonopyla* FISCHER, 1926, of Rhynchodeminae; *Elattodemus* is considered a junior synonym of *Caenoplana* MOSELEY, 1877, or *Kontikia* FROEHLICH, 1955, in the family Geoplanidae.

There are still genera of concern with poorly known species such as *Amblyplana* VON GRAFF, 1896, with the type and most species transferred to *Othelosoma* GRAY, 1869, or *Microplana* VEJDOKSKÝ, 1890. Some other genera have only one species such as *Digonopyla* FISCHER, 1926, of Rhynchodeminae, *Pseudartiocotylus* IKEDA, 1911, and *Geobenazzia* MINELLI, 1974, of Microplaninae. These require further study and evaluation. The genus *Diporodemus* HYMAN, 1938, of Microplaninae requires evaluation because of limitations in applying its definition. Nevertheless, most genera are utilized successfully and contain the majority of species in the two subfamilies of Rhynchodemidae, namely: *Cotyloplana* SPENCER, 1892, *Dolichoplana* MOSELEY, 1877, *Platydemus* VON GRAFF, 1896, and *Rhynchodemus* LEIDY, 1851, of Rhynchodeminae; *Diporodemus* (?) HYMAN, 1938, *Incapora* DU BOIS-REYMOND MARCUS, 1953, *Microplana* VEJDOKSKÝ, 1890, and *Othelosoma* GRAY, 1869, of Microplaninae.

3) See pages 85-86: On the generic names of *Caenoplana* MOSELEY, 1877, and *Coenoplana* MOSELEY, 1877.

The purpose of this section is to define the genera now accepted for each subfamily of Rhynchodemidae and consider their future usefulness. Definitions will be based on external features, histological structure of cross sections and longitudinal profile of the copulatory organ morphology. The systematic outline and some of the phraseology of HYMAN (1954) as well as other sources were used in preparing these descriptions. The type genus of the family Rhynchodemidae, the type genera of its two subfamilies, the type species of each genus, and the synonyms of family, subfamilies and genera will be listed at the beginning of the texts of the two Indices. The taxonomic key to the family, subfamilies and genera will be given in the next section of this paper.

FAMILY RHYNCHODEMIDAE VON GRAFF, 1896

Definition : Land planarians of elongate cylindroid form with two eyes near the simple, tapered anterior end ; no tentacles or head plate ; with well-defined creeping sole occupying part of the ventral surface. Anterior end may have a sucker organ on ventral surface (*Cotyloplana*).

SUBFAMILY RHYNCHODEMINAE CORRÊA, 1947

Definition : Rhynchodemidae with strong cortical musculature in which the subepithelial longitudinal muscle fibers are grouped into large, definite bundles ; penis papilla absent or greatly reduced (*Platydemus* in part).

GENUS *COTYLOPLANA* SPENCER, 1892

Definition : Rhynchodeminae, flattened body, with wide creeping sole ; one sucker, ventrally located, present at anterior of body in front of the creeping sole ; copulatory organs similar to *Platydemus* with large, spacious male antrum having a small, obtuse, penis papilla at its base through which the ejaculatory duct empties ; female organ simple, with narrow curved glandular duct, dorsally situated and opening by way of a reduced vagina into the dorsal part of the common genital antrum ; posterior diverticulum (or glandular sac) present.

GENUS *DIGONOPYLA* FISCHER, 1926

Definition : Rhynchodeminae with numerous pharynges and mouths ; no suckers ; usual condition of copulatory apparatus has a wall of tissue separating the gonopores, resulting in independent male and female openings ; copulatory organs as in *Platydemus* with minute penis papilla and dorsal entrance of vagina ; posterior diverticulum absent in the type species.

GENUS *DOLICHOPLANA* MOSELEY, 1877

Definition : Rhynchodeminae of very elongate flattened form, cross section broad and flattened with median dorsoventral indentation ; creeping sole of moderate width ; the rounded, slightly concave anterior end is bordered by glandular and sensory tracts ; two large retinal eyes located a short distance behind the anterior tip ; parenchymal longitudinal muscle fibers occur only ventral to the intestine ; male copulatory organ without penis papilla, antrum very large, elongate with many folds, opens into large elongated common antrum ; the short female, glandular duct and vagina open dorsally into the common antrum ; a prominent diverticulum (or glandular sac) opens from the posterior wall of common antrum near the gonopore.

The genus is very functional and members are characterized by a distinctive copulatory apparatus. The splendid article by CORRÊA (1947) reviews status of the various species, with an identification key.

GENUS *PLATYDEMUS* VON GRAFF, 1896

Definition : Rhynchodeminae of massive, plano-convex body, both ends tapered, with broad creeping sole ; with very large eyes ; anterior secretory and sensory tracts ; cross section broad, flattened, nerve cords plate-like ; male copulatory organ consists of a large chamber with folded epithelium and in most cases a short penis papilla ; female vagina opens from the dorsal aspect into

the large common antrum ; ventrally, a diverticulum (or glandular sac) opens from the posterior wall of the common antrum.

HYMAN (1954) states "*Platydemus* . . . is not on a very firm basis. Graff (1899, p. 204) gave a figure of the copulatory apparatus of the type species, *Platydemus grandis* (Spencer), 1892, from which it would appear that *Platydemus* may be a valid depository for rhynchodemines with a penis papilla". VON GRAFF's figure shows a small penis papilla projecting into the voluminous male antrum. There is also a small, short penis papilla in the male antrum of the following : *Platydemus manokwari* DE BEAUCHAMP, 1962 ; *Platydemus joliveti* DE BEAUCHAMP, 1972 ; *Platydemus van-heurni* DE BEAUCHAMP, 1929 ; *Platydemus longibulbus* DE BEAUCHAMP, 1972 ; and in *Platydemus lividus* VON GRAFF, 1899, as diagrammed by HYMAN (1940 a). However, the penis papilla is absent in three species : *Platydemus macrophthalmus* VON GRAFF, 1899 ; *Platydemus zimmermanni* DE BEAUCHAMP, 1952 ; and *Platydemus pindaudei* DE BEAUCHAMP, 1972. They greatly resemble the morphology of the copulatory apparatus in *Dolichoplana* (cf. DE BEAUCHAMP, 1972).

The morphology of the copulatory apparatus in *Platydemus* is distinctly different from that in *Rhynchodemus* LEIDY, 1851, since the former has the small penis papilla, diverticulum or glandular sac and dorsal entrance of the short vagina. On the other hand, when comparing *Platydemus* and *Dolichoplana* MOSELEY, 1877, the presence of the small penis papilla in the male antrum of the former, is a distinctive feature that does not appear to have been reported for *Dolichoplana* ; both genera have a ventral glandular diverticulum and a female canal which enters dorsally into the large, elongate common antrum.

OGREN's conclusion is to use *Platydemus* as the depository for those Rhynchodeminae which acquire a penis papilla in maturity, as HYMAN (1954) suggested. The species already assigned to the genus *Platydemus* but lacking sexual information, need to be reexamined to learn the morphology of the copulatory apparatus. Some species already reexamined have been assigned to different genera : e. g., *Platydemus africanus* VON GRAFF, 1899, to *Othelosoma* ; *Platydemus atropurpureus* VON GRAFF, 1899, to *Microplana* (cf. HYMAN, 1940 a) ; and *Rhynchodemus thwaitesii* MOSELEY, 1875 (VON GRAFF, 1899, classified the species in *Platydemus*), to *Microplana*. Obviously external features alone are not sufficient to serve as basis for definite assignment to *Platydemus* ; body transverse sections, histological data and sagittal profile of mature copulatory apparatus are also necessary.

Three *Platydemus* species (*macrophthalmus*, *zimmermanni* and *pindaudei*) which lack the penis papilla remain a taxonomic problem. Each must be evaluated separately. Their external features, as well as the morphology of the copulatory apparatus, which lacks the small penis papilla, resemble *Platydemus*. If this latter is a developmental or functional condition, its absence would not be sufficient reason to exclude a species from the genus. DE BEAUCHAMP (1972, p. 191) was also cautious on this point preferring to wait until sufficient numbers of species had been examined to make a reasonable judgement. For example, in *Platydemus zimmermanni*, the absence of the penis papilla may be a contingent condition (cf. DE BEAUCHAMP, 1952), since the worms appear to belong to a variable species complex resembling *Platydemus bistriatus* (GRUBE, 1868). If the species are linked in this complex, the failure of one species to develop the penis papilla would not in itself require removal of the species to another genus. Thus, OGREN is constrained to concur with DE BEAUCHAMP's (*op. cit.*) retention of these three species mentioned above in the genus *Platydemus* until further studies can be made and knowledge is available on the developmental and functional morphologies in the genus.

GENUS *RHYNCHODEMUS* LEIDY, 1851

Definition : Rhynchodeminae with elongate body, attenuated at both ends, with oval to round cross section, without peculiarities of parenchymal musculature or nervous system ; having a

creeping sole, occupying most of ventral surface; anterior end has sensory tracts and a pair of medium to large eyes situated close to anterior tip; mature male copulatory apparatus lacks a penis papilla, but develops large folds in the antrum only; and the female copulatory apparatus is simple, consisting of antrum and glandular duct without bursa or genito-intestinal connection.

This is an old and valid genus as defined above to which species can readily be assigned when sufficient information is known. Problems arise when only the juvenile condition of the copulatory apparatus is known (cf. OGREN, 1986). It is appropriate for species lacking a penis papilla, but not having the dolichoplanid morphology.

SUBFAMILY MICROPLANINAE PANTIN, 1953

Definition: Rhynchodemidae of generally short, plump, cylindroid form, anterior end often blunt; eyes often small or may be retrogressed; body wall with weak subepithelial musculature consisting of thin outer circular layer and single layer of longitudinal fibers inconspicuously developed and not aggregated into large bundles; male copulatory organ often complicated with well-developed penis papilla; female copulatory organ simple or complex, may have genito-intestinal connection, with or without seminal bursa with one or more exits.

GENUS *AMBLYPLANA* VON GRAFF, 1896

Definition: Microplaninae with plump, rounded body, two well-developed retinal eyes on the subcylindrical head; with narrow creeping sole; with well-developed bundle of parenchymal musculature and retractor muscle at anterior end of the body which pulls the front inwards. Cf. VON GRAFF (1896, p. 72, 1899, p. 507, 1916, p. 3220).

The original generic definition by VON GRAFF (1896) included the names of *Amblyplana flava* (MOSELEY, 1877) and *Amblyplana fusca* (MOSELEY, 1877), in that order. They were originally described in the genus *Rhynchodemus* by MOSELEY (1877). Following a careful study by PANTIN (1953), of these two species, *A. flava* (*olim Rhynchodemus flavus*) was transferred to the genus *Othelosoma* GRAY, 1869. However, he did not believe there was sufficient evidence to place this species in the Microplaninae or into *Othelosoma*. PANTIN (1953) also suggested that the new type species of the genus *Amblyplana* should be *Rhynchodemus fuscus* MOSELEY, 1877 (= *Amblyplana fusca* (MOSELEY) of VON GRAFF, 1896).

In response to PANTIN's (1953) suggestions, HYMAN (1954) believed VON GRAFF (1896) created the genus for a number of new species that he had (and that were described in the 1899 monograph), but he did not declare a type species. However, she indicated VON GRAFF (1899, pp. 507-508) may have meant *Amblyplana teres* VON GRAFF, 1899, to be the type. She also noted that *Amblyplana notabilis* VON GRAFF, 1899, which could have been declared a type, was the only species for which sexual anatomy was known among the 13 species placed by VON GRAFF in *Amblyplana* in his 1899 monograph. The species was transferred to *Othelosoma*. In his studies of African microplanids, MARCUS (1953, 1955 a) placed *Amblyplana flava* and *Amblyplana fusca* in *Othelosoma*: *O. flavum* (MOSELEY, 1877) and *O. fuscum* (MOSELEY, 1877). Also, DE BEAUCHAMP (1956) apparently accepted the name *Othelosoma fuscum*, during investigation of Belgian Congo species.

The first three *Amblyplana* species were described by VON GRAFF (1899) in the following order: no. 294, *A. teres*; no. 295, *A. fusca*; no. 296, *A. notabilis*. The first is now *Microplana teres* (VON GRAFF, 1899) and the other two have been transferred to the genus *Othelosoma*, i. e., *O. fuscum* (MOSELEY, 1877) and *O. notabile* (VON GRAFF, 1899). The species now remaining in the genus are known only from external features and cannot be transferred with confidence to another genus without further investigations.

OGREN does not believe *Amblyplana* is any longer a useful genus. Some reasons are: 1)

The possible type species *A. teres* was transferred to *Microplana* (see HEINZEL, 1929 ; MARCUS, 1953) and the other suggested type species are now in *Othelosoma*, indicating synonymy with two genera ; 2) External characters defining the genus do not allow it to be clearly separated from *Othelosoma*. For example, the retractable apical organ used by VON GRAFF (1896, 1899, 1916) to separate *Amblyplana* from *Othelosoma*, is found in both genera (see MARCUS, 1955 b, p. 124 ; *Othelosoma hundtum* MARCUS, 1955). Moreover, the species remaining in *Amblyplana* are poorly described or lack sexual information, thus, one does not really know the features of those species which would be the "bed fellows" so to speak of a species newly transferred there. Because of this situation the genus *Amblyplana* has not been included in the key to genera (Section C) since according to rules of nomenclature it should be classed as a synonym of *Othelosoma* ; or of *Microplana* if *Amblyplana teres* is considered the correct type. There is in fact no recognized type for the species remaining in this genus, although VON GRAFF (1899) lists no. 297 *Amblyplana zenkeri* next in his descriptions, a little known species from the Cameroons of Africa.

GENUS *DIPORODEMUS* HYMAN, 1938

Definition : Microplaninae with large seminal bursa connected to the vagina by a canal (Beauchamp's canal) and also opening asymmetrically to the exterior by a bursal canal and pore situated behind the common gonopore ; with or without a genito-intestinal connection. Cited from HYMAN (1954, p. 12).

GENUS *GEOBENAZZIA* MINELLI, 1974

Definition : Microplaninae, copulatory apparatus has a conspicuous adenodactyl in the common genital antrum ; male organ is well-developed with large seminal vesicle and penis papilla ; female organ has a copulatory bursa (or seminal receptacle) connected by one duct, the vagina, which opens into the genital antrum ; also opening into the genital antrum near the vagina is a genito-intestinal duct which apparently does not communicate with the copulatory bursa.

GENUS *INCAPORA* DU BOIS-REYMOND MARCUS, 1953

Definition : Microplaninae....with two ventral orifices in the skin, from which tubes lead to the posterior limbs of the gut ; these limbs form a transanastomosis connected to the common ovovitelloduct by the bursal canal. Cited from DU BOIS-REYMOND MARCUS (1953, p. 73).

GENUS *MICROPLANA* VEJDOSKÝ, 1890

Definition : Microplaninae with an elongate, rounded body, two small eyes ; preserved worms may have rounded anterior with greatest diameter anterior to mouth ; male copulatory organ consists of well-developed penis with muscular bulbous, bulbar cavity and elongate penis papilla projecting into short antrum ; female organ has one simple canal (vagina) entering the common genital antrum ; typically a genito-intestinal canal is present arising from vagina or behind the common ovo-vitelline duct ; seminal bursa can be present with a short connection (bursasteil, bursal canal, or proximal duct) to female tract, with or without connections to intestine, or bursa is blind lacking connections to intestine ; when bursa is absent a genito-intestinal connection is often present ; no adenodactyles, tentacles or suckers.

GENUS *OTHELOSOMA* GRAY, 1869

Definition : Microplaninae with rounded, elongated body, anterior may be blunt or inrolled, narrow, creeping sole reaches nearly to anterior tip. The seminal bursa is very large and communicates by two openings or by a common opening with two canals, a ductus vaginalis and a Beauchamp's canal, leading into the genital antrum. The dorsal anterior parenchymal musculature is very highly developed and may be differentiated as a discrete retractor muscle. Principally cited from PANTIN (1953, p. 216).

GENUS *PSEUDARTIOCOTYLUS* IKEDA, 1911

Definition (in VON GRAFF, 1916, p. 3230) : "Der riemenförmige Körper ist relativ kurz, besitzt ein zwischen den kleinen Augen liegendes uhrglasförmiges apikales Sinnesorgan und zwei neben dem Vorderende der schmalen Kriechleiste angebrachte längsovale Ambulakralgrübchen".

Characteristics of the genus are preliminary. Insufficient information in the original description does not allow for a suitable definition (cf. HEINZEL, 1929, p. 458 ; HYMAN, 1943, p. 20 ; DE BEAUCHAMP, 1930 b, p. 735, 1961, p. 120 ; see also PANTIN, 1953). IKEDA (1911, p. 121) suggests, but did not prove, a strong relationship between his species and *Artiocotylus speciosus* VON GRAFF, 1896 ; the latter is now classified as *Othelosoma speciosum* (VON GRAFF, 1896).

C. TAXONOMIC KEY TO THE SUBFAMILIES AND GENERA OF RHYNCHODEMIDAE.

- A. Eyes, one pair, large, globular, prominent ; body form, rounded, oval, or flattened ; anterior end can be tapered, slender and elongate ; subepidermal longitudinal muscle fibers are aggregated into definite large bundles, obvious in transverse sections ; copulatory apparatus, simple, without penis papilla (except in *Platydemus*, where it is very small) ; female organ without bursa or genito-intestinal connection ; pharyngeal musculature more ordered with separate groups of circular and longitudinal fibers **RHYNCHODEMIDAE**
- B. Eyes, one pair, small, angular, retrogressed ; short, plump, cylindrical bodies ; anterior end somewhat truncate ; subepidermal longitudinal muscle fibers are not aggregated into bundles ; copulatory apparatus with well-developed penis papilla and often a genito-intestinal duct system with seminal bursa ; pharyngeal musculature with scattered fibers or intermixed circular and longitudinal fibers **MICROPLANIDAE**

A. **RHYNCHODEMIDAE** :

1. With sucker area on ventral surface at anterior end **COTYLOPLANA**
Without ventral sucker area 2
2. Common gonopore for copulatory organs ; one mouth and pharynx **DIGONOPYLA**
Many pharynges and mouths ; separate male and female gonopores 3
3. Anterior end rounded, more truncate ; body elongate, strap-shaped ; cross section flattened, broad ; parenchymal longitudinal muscle bands occur only ventral to the intestine ; creeping sole occupies middle ventral third ; copulatory organs with very elongate male antrum, no penis papilla ; female organ with short dorsal duct largely as the glandular duct ; ventral diverticulum is present **DOLICHOPLANA**
Anterior end is attenuated, more pointed than above 4

4. Body broad and flattened, massive ; eyes very large ; creeping sole, broad, occupying most of ventral surface ; ventral nerve cord plate-like, very broad ; copulatory apparatus with male antrum having large bulbar cavity, *a small penis papilla arises from the anterior wall of the chamber* ; female canal enters dorsally into the genital antrum, glandular duct is large and recurved ; a ventral diverticulum is present **PLATYDEMUS**
Body small, elongate, rounded, planoconvex ; creeping sole more in medial part of ventral surface ; anterior end may have a cephalic hood with distinct demarcation ; ventral nerve cord, medial and narrow ; parenchymal longitudinal muscle is weak ; copulatory apparatus has spacious male antrum with much folded walls, no penis papilla ; female organ, simple, with long vagina and short, straight glandular duct **RHYNCHODEMUS**

B. **MICROPLANIDAE** :

1. Anterior end with two false suckers **PSEUDARTIOCOTYLUS**
Anterior end elongate, or rounded ; sucker or adhesive organ may be present 2

2. Ventral gonopore and one or more dermal-intestinal bursal pores	3
Ventral gonopore the only reproductive opening	4
3. Only one connection of seminal bursa to outside	DIPORODEMUS
More than one external canal opening to outside	INCAPORA
4. Anterior end truncate, often pulled inwards; dorsal anterior musculature often developed as a strong retractor muscle; large seminal bursa communicating with common genital antrum by two canals (ductus vaginalis and Beauchamp's canal); some species formerly in <i>Artio-cotylus</i> can have two anterior suckers	5
Anterior end tapered or blunt; retractor muscle generally absent; parenchymal muscle moderately well developed; bulbus and penis papilla vary muscular; female complex with genito-intestinal duct, seminal bursa or both, only one duct (vagina) entering the common antrum	MICROPLANA
5. No adenodactyl in male genital organ; retractor muscle typical; penis papilla elongate; seminal bursa is large, ducts enlarged; two ducts enter common genital antrum (ductus vaginalis and Beauchamp's canal)	OTHELOSOMA
An adenodactyl is present in male genital antrum; no retractor muscle; penis papilla is short; large bulbar cavity extends over gonopore; two ducts enter the common antrum from female organ, one is the vagina, the other is a duct from the seminal bursa	GEOBENAZZIA

* * * * *

The present Index arose from the taxonomic needs of the authors in their investigations of land planarians. In many cases literature has been difficult to discover and obtain. Moreover, changes recommended by diverse scientists at different times have not always been incorporated into one single systematic work, hence, may have been overlooked or unknown to new investigators. We believe this Index will be of value to all future persons studying land planarians or making use of their names. We hope that it will provide some standardization for citations of names and literature. Part II of the present Index to the subfamily Microplaninae will be published in 1989, together with complete references (cf. OGREN & KAWAKATSU, Ms.). An Index of the family Geoplanidae also will be published in the near future (cf. OGREN & KAWAKATSU, Ms.).

As in our previous Index on *Bipalium* (OGREN & KAWAKATSU, 1987; see also its Additions and Corrections by OGREN & KAWAKATSU, 1988), an attempt is made to collect major known taxonomic information on all rhynchodemids of the world. The complete synonymy of the species is listed. The valid specific names are arranged in alphabetical order. Usually, new varieties published in original papers are treated as subspecies. Corrections of erroneous spellings of specific names have been made according to the International Code of Zoological Nomenclature (ICZN), Third Edition (1985). Variations in the spelling of individual names, which may be spelling errors, misprints, etc., are also listed.

In the subfamily Rhynchodeminae no new specific epithets are necessary, whereas the following new name is established in the subfamily Microplaninae: *Microplana gebavoeltzkowi* for *Amblyplana Voeltzkowi* GEBA, 1909 (see page 85).

The following abbreviations are used in the Index: anon., anonymous; comb. nov., new combination; emend., emended name; nom. nov., new name; nom. nud., unavailable name (ICZN, art. 12, 13); n. sp., new species; n. var., new variety, listed only as used by original describers, but now

written in style of subspecies names.

For the citation of original figures in each paper, the following abbreviations are employed : AE, arrangement of eyes ; CP, parts of the body showing color patterns ; DB, dorsal view of the body ; DH, dorsal view of the head ; DVB, dorsal and ventral views of the body ; DVH, dorsal and ventral views of the head ; FCA, schematic figure of the copulatory apparatus ; FGO, schematic figure of the genital organs ; HI, histological figures ; PCA, photographs of the copulatory apparatus ; VB, ventral view of the body ; VH, ventral view of the head.

The authors are indebted to Professor Dr. Teiji KIFUNE, Department of Parasitology, School of Medicine, Fukuoka University, Fukuoka, Japan, for his careful reading of the early draft of this publication including Latin and Greek grammatical problems. They are also indebted to the following colleagues for generously supplying copies of rare papers : Dr. Eudoxia M. FROEHLICH and Dr. Diva D. CORRÊA (São Paulo) ; Dr. Elvezio GHIRARDELLI (Trieste) ; Dr. Enrico VANNINI (Bologna) ; Dr. Ken-Ichi TAJIKA (Tôkyô) ; Dr. Yoshikazu KISHIDA (Okayama) ; Dr. Jan HENDELBERG (Göteborg) ; Dr. Hugh D. JONES (Manchester) ; Dr. Roman KENK (now Cupertino, California) ; Drs. Beate & Ulrich EHLERS (Göttingen) ; Dr. Anno FAUBEL (Hamburg) ; Dr. Roland PETER (Salzburg) ; Dr. L. R. G. CANNON (South Brisbane).

And finally, OGREN is grateful to Wilkes College for a Sabbatical Leave, Spring Semester 1985, during which period data for the Introduction and Indices of land planarian species were initiated and study manuscripts prepared. For publishing research results of this series of literary work, financial assistance from Fuji Women's College is gratefully acknowledged.

INDEX

Order TRICLADIDA LANG, 1884

Suborder TERRICOLA HALLEZ, 1890

Family RHYNCHODEMIDAE VON GRAFF, 1896

Type genus : *Rhynchodemus* LEIDY, 1851

Geoplanidae (*Rhynchodemus* + *Dolichoplana*) : Moseley, 1877.

Geoplanidae (*Geodesmus* + *Rhynchodemus* + *Dolichoplana* + *Microplana*) : Hallez, 1893.

Rhynchodemidae n. fam. von Graff, 1896.

Cotyloplanidae : von Graff, 1896.

Digonopylidae : Fischer, 1926.

Myriopharyngidae : Haslauer-Gamisch, 1981.

Note : Haslauer-Gamisch (1982) erected a new family Platydemidae and placed 3 new species of *Platydemus* and a single new species of a new genus *Elattodemus*. Apparently, all these species are not Rhynchodemidae but *Caenoplana*, or *Kontikia*, or some other genus in the family Geoplanidae Stimpson, 1857. Cf. Ogren & Kawakatsu, Ms.

Subfamily RHYNCHODEMINAE CORRÊA, 1947

Type genus : *Rhynchodemus* LEIDY, 1851

nec Rhynchodeminae (*Rhynchodemus* + *Artiocotylus* + *Pseudartiocotylus*) : Heinzel, 1929.

Desmorrhynchinae (*Desmorphynchus* + *Dolichoplana* + *Platydemus*) : Heinzel, 1929.

Dolichoplaninae (*Rhynchodemus* + *Dolichoplana* + *Platydemus*) : Hyman, 1943.

Genus *Caenoplana* Moseley, 1877

Caenoplana n. g. Moseley, 1877 : 285.

Type species : *Caenoplana coerulea* Moseley, 1877.

Geoplanidae. Cf. Ogren & Kawakatsu, Ms.

Caenoplana coerulea Moseley, 1877

See *Caenoplana coerulea* Moseley, 1877. Geoplanidae. Cf. Ogren & Kawakatsu, Ms.

Caenoplana? (or *Kontikia?*) *quadrilineata* (Haslauer-Gamisch, 1982) comb. nov.

See *Platydemus quadrilineatus* Haslauer-Gamisch, 1982. Cf. Ogren & Kawakatsu, Ms.

Caenoplana? (or *Kontikia?*) *renschi* (Haslauer-Gamisch, 1982) comb. nov.

See *Platydemus renschi* Haslauer-Gamisch, 1982. Geoplanidae. Cf. Ogren & Kawakatsu, Ms.

Caenoplana? (or *Kontikia?*) *steinboecki* (Haslauer-Gamisch, 1982) comb. nov.

See *Elattodemus steinböckii* Haslauer-Gamisch, 1982. Geoplanidae. Cf. Ogren & Kawakatsu, Ms.

Caenoplana? (or *Kontikia?*) *sumbawaeiensis* (Haslauer-Gamisch, 1982) comb. nov.

See *Platydemus sumbawaeiensis* Haslauer-Gamisch, 1982. Geoplanidae. Cf. Ogren & Kawakatsu, Ms.

Genus *Cotyloplana* Spencer, 1892

Cotyloplana n. g. Spencer, 1892 : 44.

Type species : *Cotyloplana whiteleggei* Spencer, 1892.

Literature : von Graff, 1896 : 69 ; von Graff, 1899 : 477 ; von Graff, 1916 : 3227 ; Marcus, 1953 : 25. Here placed under *Cotyloplana* and *Pelmatoplana* (in part) in Geoplanidae.

Cotyloplana borneensis de Beauchamp, 1933

Cotyloplana borneensis n. sp. de Beauchamp, 1933 : 117-119, fig 3 (DH, FCA). Kamborangah, Mt. Kinabalu, N. Borneo / E. Malaysia.

Cotyloplana borneensis : de Beauchamp, 1940 : 117 ; pl. XXVIII, figs. A-B (DH, FCA). Gunong Pulai, Johore / Malaysia.

Cotyloplana borneensis : Tu, 1940 : 219.

Cotyloplana borneensis : de Beauchamp, 1961 : 115, fig. 58 J (DH).

Cotyloplana borneensis : Kawakatsu, 1986 : 12-13.

Cotyloplana diesingi von Graff, 1899

Cotyloplana diesingi nom. nud. von Graff, 1897 : 113-114. S. Celebes / Indonesia.

Cotyloplana diesingi n. sp. von Graff, 1899 : 480 ; taf. XIX, fig. 38 (CP in color). Lombokatang, S. Celebes / Indonesia.

Cotyloplana dugesi von Graff, 1899

Cotyloplana dugesi nom. nud. von Graff, 1897 : 113-114. S. Celebes / Indonesia.

Cotyloplana dugesi n. sp. von Graff, 1899 : 479-480 ; taf. XIX, figs. 34-37 (DB, VH in color). Lombokatang, S. Celebes / Indonesia.

Cotyloplana dugesi : von Graff, 1912 : taf. XXXIV, figs. 26-27 (VH in color).

Cotyloplana dugesi : von Graff, 1914 : 2902, 2920.

Cotyloplana magalophthalma (Loman, 1890)

Rhynochodemus megalophthalmus n. sp. Loman, 1890 : 134-135 ; taf. XIII, fig. 15 (DB) ; XIII,

fig. 21 (E). Tjibodas, Java/Indonesia.

Cotyloplana megalophtalma : von Graff, 1899 : 479 ; taf. LII, figs. 1-6 (HI in color). Tjibodas, Java/Indonesia.

Rhynchodemus megalophtalmus : von Graff, 1914 : 2892.

Cotyloplana nilgiriensis Whitehouse, 1919

See *Pelmatoplana nilgiriensis* (Whitehouse, 1919). Geoplanidae. Cf. Ogren & Kawakatsu, Ms. *Cotyloplana pilleata* Whitehouse, 1915

Cotyloplana pilleata n. sp. Whitehouse, 1915 : 463-464 ; pl. XXX, figs. 27-31 (DB, DVH, CP). Yembung and Rotung districts, Assam/India.

Cotyloplana punctata Spencer, 1892

Cotyloplana punctata n. sp. Spencer, 1892 : 45 ; pl. V, figs. 5-8 (DVB, DH). Lord Howe Island, N. S. W./Australia.

Cotyloplana punctata : von Graff, 1896 a : 69.

Cotyloplana punctata : von Graff, 1899 : 208, text-fig. 57 (FCA) ; taf. LI, figs. 8-13 (HI in color), LV, fig. 1 (HI in color), LVIII, fig. 57 (FCA). Lord Howe Island.

Digonopyla (Dolichoplana) harmeri : Fisher, 1926 : 257-261, fig. 1 (FCA).

Digonopyla harmeri : Meixner, 1928 : 595.

Digonopyla harmeri : Hyman, 1938 : 26, 31.

Dolichoplana harmeri : Corrêa, 1947 : 60.

Digonopyla harmeri : Crezée, 1982 : 734-735.

Digonopyla? tetracelis (Haslauer-Gamisch, 1981) comb. nov.

Eine der Gattung *Digonopyla* (Herrn Prof. Meixner festgestellt werden) : Rensch, 1930 : 147-148.

The vicinity of Sita, W. of Badjawa (in the rain forest), West-Flores/Indonesia.

Myriopharynx tetracelis n. sp. Haslauer-Gamisch, 1981 : 23-54, figs. 1-25 (DVB, DH, CP, HI).
Komba Ndaro, 14 km W of Endeh, near Küste, Flores/Indonesia.

Note : This new species was described under the n. fam. (Myriopharyngidae Haslauer-Gamisch, 1981) and n. g. (*Myriopharynx* Haulauer-Gamisch, 1981). Since genital anatomy was not described, its taxonomic status is uncertain. Appears to belong in *Digonopyla* which is the only genus with multiple mouths and pharynges.

Genus *Dolichoplana* Moseley, 1877

Dolichoplana n. g. Moseley, 1877 : 286.

Type species : *Dolichoplana striata* Moseley, 1877.

Literature : von Graff, 1896 : 71 ; von Graff, 1899 : 531 ; von Graff, 1916 : 3229 ; Heinzel, 1929 : 460 ; Bresslau, 1933 : 283 ; Hyman, 1943 : 19-20 ; Corrêa, 1947 : 60-61 ; Prudhoe, 1949 a : 428 ; Pantin, 1953 : 216 ; Ball & Reynoldson, 1981 : 110. Here placed under *Dolichoplana* and *Microplana* (in part ; see under Microplaninae). Cf. Ogren & Kawakatsu, Ms.

Dolichoplana bosci von Graff, 1899

Ambon (Amboina ; Amboyna), Ambon Island, Maluku Kepulauan/Indonesia.

Dolichoplana tristis : Corrêa, 1947 : 60, 68-69.

Dolichoplana voeltzkowi von Graff, 1899

See *Microplana voeltzkowi* (von Graff, 1899). Microplaninae. Cf. Ogren & Kawakatsu, Ms.

Dolichoplana vircata du Bois-Reymond Marcus, 1957

Dolichoplana vircata n. sp. du Bois-Reymond Marcus, 1957 : 154-157, 180-181, pl. 1, figs. 1-6 (DH, CP, HI, FCA). Chanchamayo Valley (800 m)/Peru.

Genus *Elattodemus* Haslauer-Gamisch, 1982

Elattodemus n. g. Haslauer-Gamisch, 1982 : 57.

Type species : *Elattodemus steinböcki* Haslauer-Gamisch, 1982.

Here placed in *Caenoplana*, or *Kontikia*, in the family Geoplanidae. Cf. Ogren & Kawakatsu, Ms.

Elattodemus steinböcki Haslauer-Gamisch, 1982

See *Caenoplana?* (or *Kontikia?*) *steinboecki* (Haslauer-Gamisch, 1982). Geoplanidae. Cf. Ogren & Kawakatsu, Ms.

Note : Dr. Haslauer-Gamisch described a new genus *Elattodemus* (type species : *Elattodemus steinböcki* Haslauer-Gamisch, 1982) in her new family Platydemidae (type genus : *Elattodemus* Haslauer-Gamisch, 1982). Since the generic definition is ambiguous, *Elattodemus* seems to be a synonym of genera *Caenoplana* Moseley, 1877, and *Kontikia* Froehlich, 1955, in the family Geoplanidae. She also described 3 new species of *Platydemus* (*quadrilineatus*, *renschi*, and *sumbawaeiensis*) under her new family Platydemidae. These species now appear to belong in the Geoplanidae under *Caenoplana?*, or *Kontikia?* Cf. Ogren & Kawakatsu, Ms.

Genus *Fasciola* - See Rhynchodeminae.

Trematode, Turbellarian and Nemerteans. Cf. Kenk (1974, pp. 30-31) ; Ogren & Kawakatsu, Ms.

Fasciola torva Müller, 1774

Here placed under *Platydemus*, *Othelosoma* (in part), and *Geoplana?*, or *Kontikia?* (in part), in Geoplanidae. Cf. Ogren & Kawakatsu, Ms.

Platydemus africanus von Graff, 1899

See *Othelosoma africanum* (von Graff, 1899). Microplaninae. Cf. Ogren & Kawakatsu, Ms.

Platydemus albicinctus von Graff, 1899

Platydemus albicinctus n. sp. von Graff, 1899 : 529; taf. XVI, fig. 28 (DB in color), L, figs. 6-7 (HI in color). Peleliu Island (Palau-Insel Peleliu)/ Palau Islands.

Platydemus albicinctus: von Graff, 1913 : 2813-2814, fig. 50 (DB).

Platydemus albicinctus: de Beauchamp, 1929 : 419.

Platydemus assimilis Wood, 1926

Platydemus assimilis n. sp. Wood, 1926 : 611-612, text-fig. 5 a, b (DVB). Barrington Tops, the southern end of the Mount Royal Range (ca. 260 km N of Sydney), New South Wales/Australia.

Note: Wood (1926) noted as follows: "The species closely resembles *Platydemus victoriae* Dendy, but it has the stripes more clearly defined and is very much darker in colour". Cf. *Platydemus victoriae* (Dendy, 1890).

Platydemus atropurpureus von Graff, 1899

See *Microplana atropurpurea* (von Graff, 1899); *Rhynchodemus atropurpureus* (von Graff, 1899). Microplaninae. Cf. Ogren & Kawakatsu, Ms.

Platydemus bistriatus (Grube, 1868)

Rhynchodesmus bistriatus n. sp. Grube, 1868 : 46. Samoa (Fischerinseln; see Note). Spelling error.

Rhynchodemus bistriatus (*Geodesmus*): Moseley, 1875 : 107. Giessen (?).

Rhynchodemus bistriatus: Moseley, 1877 : 289. Samoa Islands (see Note).

Rhynchodemus bistriatus: Spencer, 1892 : 43. Samoa Islands (see Note).

Platydemus bistriatus: von Graff, 1899 : 527-528; taf. XVI, figs. 20-22 (DB, DVH in color). Viti Levu (Viti-Inseln)/ Fiji.

Platydemus bistriatus: de Beauchamp, 1952 : 55-58, fig. 3 (FCA). Viti Levu, Tholo-i-Suva/Fiji. Syn. *Platydemus lineolatus* von Graff, 1899.

Platydemus bistriatus: de Beauchamp, 1962 : 614.

Note: The type locality for this species by Grube (1868) is "Fischerinseln" (i.e., Samoa). von Graff (1899, p. 528) indicated that it was a *lapsus calmi*.

Platydemus bivittatus von Graff, 1899

Platydemus bivittatus n. sp. von Graff, 1899 : 528-529 ; taf. XIII, figs. 47-50 (DB, DVH, CP in color). Milne Bay, Samarai/Papua New Guinea (New-Guinea).

Platydemus bivittatus : von Linden, 1900 : 558.

Platydemus bivittatus : Heinzel, 1929 : 426-431, 458-459 ; taf. 10, figs. 1-2 (FGO), 11, fig. 1 (FCA).

Platydemus bivittatus : de Beauchamp, 1929 : 415. Syn. of *Platydemus macrophthalmus* von Graff, 1899.

Platydemus bivittatus : Corrêa, 1947 : 68.

Platydemus bivittatus : de Beauchamp, 1952 : 56.

Platydemus bivittatus : Marcus, 1955 b : 25.

Platydemus bivittatus : de Beauchamp, 1962 : 613.

Platydemus bivittatus : de Beauchamp, 1972 : 190.

Platydemus boehmigi Geba, 1909

Platydemus boehmigi n. sp. Geba, 1909 : 397 ; taf. 20, figs. 24-25 (DVB). Angasidga/Comoro Islands (Îles Comores).

Platydemus Boehmigi : von Graff, 1912 : 2639.

[nec *Rhynchodemus boehmigi* von Graff, 1899].

Platydemus boholicus von Graff, 1899

Platydemus boholicus n. sp. von Graff, 1899 : 523 ; taf. XV, figs. 29-30 (DB, CP in color). Bohol/Philippines.

Platydemus boholicus : von Graff, 1913 : 2794, fig. 45 (CP).

Platydemus boholichus : Tu, 1940 : 219. Spelling error.

Platydemus conspersus von Graff, 1899

Platydemus conspersus n. sp. von Graff, 1899 : 518-519 ; taf. XIV, fig. 31 (DB in color). Philippines.

Platydemus conspersus : Tu, 1940 : 219.

Platydemus dubius (Spencer, 1892)

Rhynchodemus dubius n. sp. Spencer, 1892 : 48-49, pl. 6, figs. 24-25 (DVB). Lord Howe Island, N. S. W./Australia.

Platydemus dubius : von Graff, 1899 : 523-524 ; taf. XV, fig. 19 (CP in color). Lord Howe Island, N. S. W./Australia.

Platydemus fasciatus (Spencer, 1892)

Rhynchodemus fasciatus n. sp. Spencer, 1892 : 46 ; pl. 5, figs. 9-10 (DVB). Lord Howe Island, N. S. W./Australia.

Platydemus fasciatus : von Graff, 1899 : 205, text-fig. 55 (FCA), 515-516 ; taf. XV, fig. 24 (CP in color), LVIII, fig. 55 (FCA). Lord Howe Island.

Platydemus fasciatus : Bendl, 1908 a : 550-552.

Platydemus fasciatus : Bendl, 1908 b : 316-318.

Platydemus fasciatus : Heinzel, 1929 : 459.

Platydemus fasciatus : Hyman, 1940 a : 359.

Platydemus fasciatus : de Beauchamp, 1952 : 56.

Platydemus fasciatus : de Beauchamp, 1962 : 614-615.

Platydemus fletcheri (Spencer, 1892)

Rhynchodemus fletcheri n. sp. Spencer, 1892 : 49 ; pl. 6, figs. 26-27 (DVB). Lord Howe Island, N. S. W./Australia.

Platydemus fletcheri : von Graff, 1899 : 528.

Platydemus grandis (Spencer, 1892)

Rhynchodemus grandis n. sp. Spencer, 1892 : 47-48 ; 47-48 ; pl. 6, figs. 14-19 (DVB). Lord Howe Island, N. S. W./Australia.

Platydemus grandis : von Graff, 1899 : 204, text-fig. 54 (FCA), 516-517 ; taf. XVI, fig. 42 (DH in color), XLIX, figs. 1-14 (HI in color), L, figs. 1-3 (HI in color). Lord Howe Island, N. S. W./Australia.

Platydemus grandis : von Linden, 1900 : 559.

Platydemus grandis : Bendl, 1908 a : 551.

Platydemus grandis : Bendl, 1908 b : 317.

Platydemus grandis : Ikeda, 1911 : 118.

Platydemus grandis : von Graff, 1912 : taf. XLIV, figs. 2-3 (HI), XLIV, fig. 11 (HI), XVLI, figs. 17-20 (HI), XLIX, figs. 16-19 (HI), LVI, fig. 1 (FCA).

Platydemus grandis : von Graff, 1913 : 2761, 2806.

Platydemus grandis : von Graff, 1914 : 2907, 2934-2935, 2943, 2945.

Platydemus grandis : von Graff, 1915 : 2991, 2994, 3030.

Platydemus grandis : de Beauchamp, 1929 : 419.

Platydemus grandis : Heinzel, 1929 : 459.

Platydemus grandis : Corrêa, 1947 : 67.

Platydemus grandis : Hyman, 1954 : 18.

Platydemus grandis : Marcus, 1955 b : 25.

Platydemus grandis : de Beauchamp, 1962 : 614.

Platydemus insularis von Graff, 1899

Platydemus insularis n. sp. von Graff, 1899 : 521 ; taf. XV, figs. 27-28 (DB in color). Peleliu Island (Palau-Insel Peleliu)/Palau Islands.

Platydemus joliveti de Beauchamp, 1972

Platydemus joliveti n. sp. de Beauchamp, 1972 : 181-183, figs. 1-2 (FCA). Mt. Wilhelm, Pin daude Station (3625 m)/Papua New Guinea.

Platydemus kraepelini von Graff, 1899

Platydemus kraepelini n. sp. von Graff, 1899 : 519 ; taf. XIV, figs. 15-19 (DVB, DH, CP in color). Viti Levu (Viti-Inseln)/Fiji.

Platydemus kraepelini : de Beauchamp, 1952 : 58. Ovalau, near Vuma/Fiji.

Note : de Beauchamp (1952) considered this species and *Platydemus lineolatus* von Graff, 1899, to be synonyms of *Platydemus bistriatus* (Grube, 1868).

Platydemus laterolineatus (Spencer, 1982)

Rhynchodemus laterolineatus n. sp. Spencer, 1892 : 46-47 ; pl. 5, figs. 11-13 (DVB). Lord Howe Island, N. S. W./Australia.

Platydemus laterolineatus : von Graff, 1899 : 99, text-fig. 5 C (HI), 517-518 ; taf. XVII, figs. 35-37 (CP in color), L, figs. 10-15 (HI in color). Lord Howe Island, N. S. W./Australia.

Platydemus laterolineatus : von Graff, 1912 : taf. XXXIII, figs. 37-39 (CP).

Platydemus laterolineatus : von Graff, 1913 : 2790, fig. 35 C (HI).

Platydemus laterolineatus : von Graff, 1914 : 2937.

Platydemus laterolineatus : von Graff, 1917 : 3355.

Platydemus laterolineatus : Frieb. 1923 : 512.

Platydemus leidyi von Graff, 1899

Platydemus leidyi nom. nud. von Graff, 1897 : 113-114. S. Celebes/Indonesia.

Platydemus leidyi n. sp. von Graff, 1899 : 529 ; taf. XIX, figs. 39-40 (DB in color, etc.). Lompobatang, S. Celebes/Indonesia.

Platydemus lineolatus von Graff, 1899

Rhynchodemus lineolatus nom. nud. Grube, Ms. Cited from von Graff, 1899 : 527.

Platydemus lineolatus n. sp. von Graff, 1899 : 526-527 ; taf. XVI, figs. 37-41 (DB, DH, CP in color). Viti Levu (Viti-Inseln)/Fiji.

Platydemus lineolatus : de Beauchamp, 1952 : 58. Syn. of *Platydemus bistriatus* (Grube, 1868).

Platydemus lividus von Graff, 1899

Platydemus lividus n. sp. von Graff, 1899 : 524-525 ; taf. XV, fig. 3 (DB in color), L, figs. 4-5 (HI in color). Peleliu Island (Palau-Insel Peleliu)/Palau Islands.

Platydemus lividus : von Graff, 1913 : 2814-2815, fig. 53 (HI), 2816, fig. 54 (DB), 2820.

Platydemus lividus : Hymari, 1940 a : 355-359, figs. 10-11 (DB, FCA). Yap/Caroline Islands.

Platydemus lividus : de Beauchamp, 1952 : 58.

Platydemus lividus : Marcus, 1954 : 52.

Platydemus lividus : de Beauchamp, 1962 : 614-615.

Platydemus longibulbus de Beauchamp, 1972

Platydemus longibulbus n. sp. de Beauchamp, 1972 : 183-185, fig. 3 (FCA). Mt. Wilhelm, Pin daude Station (3625 m)/Papua New Guinea.

Platydemus luteicollis von Graff, 1899

Platydemus luteicollis n. sp. von Graff, 1899 : 519-520 ; taf. XIII, figs. 45-46 (DB in color).

Milne Bay, Samarai/Papua New Guinea (Neu-Guinea).

Platydemus macrophthalmus von Graff, 1899

Platydemus macrophthalmus n. sp. von Graff, 1899 : 520-521 ; taf. XIII, figs. 40-41 (DB, CP in coor). Milne Bay, Samarai/Papua New Guinea (Neu-Guinea).

Platydemus macrophthalmus : von Graff, 1914 : 2920.

Platydemus macrophthalmus : de Beauchamp, 1929 : 415-417, fig. 3 (FCA). Mt. Doorman (3500 m), Nelle Guinée / Indonesia. Syn. *Platydemus bivittatus* von Graff, 1899.

Platydemus macrophthalmus : Bresslau, 1933 : 57, fig. 26 (5) (DB).

Platydemus macrophthalmus : Corrêa, 1947 : 68, 70.

Platydemus macrophthalmus : de Beauchamp, 1962 : 613-614.

Platydemus macrophthalmus : de Beauchamp, 1972 : 183, 190.

Platydemus manokwari de Beauchamp, 1962

Platydemus manokwari n. sp. de Beauchamp, 1962 : 609-615, fig. 1 A-C (DH, FCA). Station de Manokwari, Netherlands New Guinea, Irian Jaya (Irian Barat)/Indonesia.

Platydemus manokwari : de Beauchamp, 1972 : 183, 190.

Rhynchodemid turbellarian : Mead, 1979 : 72, fig. 3 (DB). Manokwari, Irian Jaya/Indonesia. Malaysia printed on page 72 is an error.

Platydemus manokwari : Murayama & Kawakatsu, 1982 : 7-9, fig. 1 A-E (DVB, etc.). Guam/U. S. A.

Platydemus manokwari : Muniappan, 1983 a : 172. Guam/U. S. A.

Platydemus manokwari : Muniappan, 1983 b : 43-46, figs. 1-2 (ecological figures). Guam/U. S. A.

Platydemus manokwari : Muniappan, Duhmel, Santiago & Acay, 1986 : 183-188, fig. 1-5 (ecological figures). Bugsk Island/Philippines.

Platydemus manokwari : Kawakatsu, Oki, Tamura, Sekiguchi & Ogren, 1987 : 21-24, figs. 3 A-E (DVE, DH), 5 A-B (FCA), 7 A-B (chromosomes), 8 E-F (idiograms). Guam/U. S. A.; Bugsk Island/Philippines.

Platydemus manokwari : Oki, Tamura, Ogren & Kawakatsu, 1987 : 44.

Platydeus manokwari : Waterhouse & Norris, 1987 : 269, 271-273.

Platydemus manokwari : Muniappan, 1987 : 127-133 : figs. 3-4. Maldives (Maldives).

Platydemus manokwari : Ogren & Kawakatsu, 1988 : 99. New Guinea/West Irian (Irian Jaya; Irian Barat).

Platydemus manokwari : Oki, Tamura, Ogren & Kawakatsu, 1989 (In press) : 139-144, fig. 1 E-F (idiograms; n=6, 2x=12). Guam/U. S. A.; Bugsk Island/Philippines.

Platydemus mediolineatus (Spencer, 1892)

Rhynchodemus mediolineatus n. sp. Spencer, 1892 : 48 ; pl. 6, figs. 20-23 (DVB). Lord Howe Island, N. S. W./Australia.

Platydemus mediolineatus : von Graff, 1899 : 526 ; taf. XV, figs. 31-32 (CP in color). Lord Howe Island, N. S. W./Australia.

Platydemus miniatus von Graff, 1899

Platydemus miniatus n. sp. von Graff, 1899 : 520 ; taf. XV, figs. 17-18 (DB, DH in color). Peleliu Island (Palau-Insel Peleliu)/Palau Islands.

Platydemus montanus Mell, 1904

Platydemus montanus n. sp. Mell, 1904 : 484-488 ; taf. 17, figs. 13-18 (DVB, HI). Abera, Djamjam (3100 m)/S. Ethiopia.

Platydemus montanus : Meixner, 1928 : 595.

Platydemus montanus : Marcus, 1953 : 28.

Platydemus montanus : Marcus, 1955 b : 25.

Platydemus moseleyi (Fletcher et Hamilton, 1888)

Rhynchodemus Moseleyi n. sp. Fletcher & Hamilton, 1888 : 371 ; pl. V, figs. 9-10 (DB, DH). Beaudesert Hills, Guntawang, N. S. W./Australia.

Rhynchodemus moseleyi : Dendy, 1895 a : 189.

Rhynchodemus moseleyi : Dendy, 1895 b : 732-733. Syn. (?) *Rhynchodemus niger* Fletcher et Hamilton, 1888 ; *Rhynchodemus obscurus* Fletcher et Hamilton, 1888 ; *Rhynchodemus trilineatus* Fletcher et Hamilton, 1888 ; *Rhynchodemus simulans* Dendy, 1892.

Rhynchodemus Moseleyi : Dendy, 1895 c : 399. Albert Park, Auckland/New Zealand.

Rhynchodemus moseleyi : Dendy, 1895 d : 20. Cited from von Graff, 1899 : 522.

Platydemus moseleyi : von Graff, 1899 : 522-523. Beaudesert Hills and Guntawang, N. S. W./Australia.

Platydemus niger (Fletcher et Hamilton, 1888)

Rhynchodemus niger n. sp. Fletcher & Hamilton, 1888 : 374. Guntawang, New South Wales/Australia.

Rhynchodemus niger : Dendy, 1895 b : 733. Syn. of *Rhynchodemus moseleyi* Fletcher et Hamilton, 1888.

Platydemus niger : von Graff, 1899 : 518. Guntawang, N. S. W./Australia.

Platydemus pindaudei de Beauchamp, 1972

Platydemus pindaudei n. sp. de Beauchamp, 1972 : 185-187, fig. 4 (FCA). Mt. Wilhelm, Pindade Station (3624 m)/Papua New Guinea.

Platydemus quadrilineatus Haslauer-Gamisch, 1982

See *Caenopiana?* (or *Kontikia?*) *quadrilineatus* (Haslauer-Gamisch, 1982). Geoplanidae. Cf. Ogren & Kawakatsu, Ms.

Note: See also *Elattodemus steinböcki* Haslauer-Gamisch, 1982, in the present list.

Platydemus quadristriatus (Grube, 1868)

Rhynchodemus quadristriatus n. sp. Grube, 1868 : 46. Samoa (see Note).

Rhynchodemus quadristriatus: Moseley, 1875 : 107. Samoa Islands (see Note).

Rhynchodemus quadristriatus: Moseley, 1877 : 289. Samoa Islands (see Note).

Rhynchodemus quadristriatus: Spencer, 1892 : 43. Samoa Islands (see Note).

Platydemus quadristriatus: von Graff, 1899 : 530 ; taf. XVII, figs. 28-29 (DVB in color). Tongatapu (Tonga Tabu) Group/Tonga.

Platydemus quadristriatus: Prudhoe, 1949 b : 255.

Note: The type locality published for this species by Grube (1868) was "Fischerinseln" (i. e., Samoa). However, von Graff (1899, p. 530) indicated that this was a *lapsus calami*, since in the museum records the locality, in Grube's own handwriting, was given as Tonga Tabu.

Platydemus renschi Haslauer-Gamisch, 1982

See *Caenopiana?* (or *Kontikia?*) *rengschii* (Haslauer-Gamisch, 1982). Geoplanidae. Cf. Ogren & Kawakatsu, Ms.

Note: See also *Elattodemus steinböcki* Haslauer-Gamisch, 1982, in the present list.

Platydemus septemstriatus von Graff, 1899

Platydemus septemstriatus n. sp. von Graff, 1899 : 526 ; taf. XVI, fig. 29 (DB in color). Peleliu Island (Palau-Insel Peleliu)/Palau Islands.

Platydemus sumbawaeiensis Haslauer-Gamisch, 1982

See *Caenopiana?* (or *Kontikia?*) *sumbawaeiensis* (Haslauer-Gamisch, 1982). Geoplanidae. Cf. Ogren & Kawakatsu, Ms.

Note: See also *Elattodemus steinböcki* Haslauer-Gamisch, 1982, in the present list.

Platydemus tabatteldili von Graff, 1899

Platydemus tabatteldili n. sp. von Graff, 1899 : 520 ; taf. XV, fig. 6 (DB in color). Peleliu Island (Palau-Insel Peleliu)/Palau Islands.

Platydemus thwaitesii (Moseley, 1875)

See *Microplana thwaitesii* (Moseley, 1875); *Rhynchodemus thwaitesii* Moseley, 1875. Microplaninae. Cf. Ogren & Kawakatsu, Ms.

Platydemus trilineatus (Fletcher et Hamilton, 1888)

Rhynchodemus trilineatus n. sp. Fletcher & Hamilton, 1888 : 373 ; pl. V, figs. 11-12 (DB, DH). Guntawang, N. S. W./Australia.

Rhynchodemus trilineatus: Dendy, 1895 b : 733. Syn. of *Rhynchodemus moseleyi* Fletcher et Hamilton, 1888.

Platydemus trilineatus: von Graff, 1899 : 522. Guntawales, N. S. W./Australia.

Platydemus vanheurni de Beauchamp, 1929

Platydemus van-heurni n. sp. de Beauchamp, 1929 : 417-419, figs. 4-5 (VB, FCA). Pont de Rotan (200 m) and Mt. Doorman (2400 m), Netherlands New Guinea, Irian Jaya (Irian Barat)/Indonesia.

Platydemus van-heurni: de Beauchamp, 1962 : 614.

Platydemus van-heurni: de Beauchamp, 1972 : 191.

Platydemus victoriae (Dendy, 1890)

Rhynchodemus victoriae n. sp. Dendy, 1890 : 79 ; pl. 7, figs. 15, 15 a (DVB). Croajingolong,

Victoria / Australia.

Rhynchodemus victoriae : Dendy, 1892 : 26-27.

Rhynchodemus victoriae var. *steelii* n. var. Dendy, 1895 b : 733-734. Blue Mountains, Wentworth Falls and Blackheath, N. S. W./Australia.

Platydemus victoriae : von Graff, 1899 : 525 ; taf. XV, figs. 20-21 (DVH in color). Croajingolong in Victoria and Blue Mountains in New South Wales/Australia.

Platydemus victoriae : Wood, 1926 : 613.

Platydemus victoriae : Heinzel, 1929 : 431-433, 459 ; taf. 10, fig. 3 (FGO), 11, fig. 2 (FCA).

Platydemus victoriae : de Beauchamp, 1952 : 56.

Platydemus victoriae : Marcus, 1955 b : 25.

Platydemus victoriae : de Beauchamp, 1962 : 614.

Rhynchodemus victoriae : Winsor, 1977 : 144. Eastern Highlands, Victoria/Australia.

Platydemus victoriae var. *steelii* (Dendy, 1895)

See *Platydemus victoriae* (Dendy, 1890).

Platydemus zimmermanni de Beauchamp, 1952

Platydemus zimmermanni n. sp. de Beauchamp, 1952 : 58-62, figs. 4-5 (DB, FCA). Ovalau, near Vuma/Fiji.

Platydemus Zimmermanni : de Beauchamp, 1962 : 614.

Genus *Rhynchodemus* Leidy, 1851

Rhynchodemus n. g. Leidy, 1851 b : 289.

Type species : *Planaria sylvatica* Leidy, 1851 (a).

Literature : von Graff, 1896 a : 71 ; von Graff, 1899 : 484 ; von Graff, 1916 : 3230 ; Heinzel, 1929 : 456-458 ; Bresslau, 1933 : 283 ; Hyman, 1943 : 18-20 ; Prudhoe, 1949 a : 427-428 ; Pantin, 1953 : 216 ; Hyman, 1954 : 17-19 ; Ball & Reynoldson, 1981 : 108. Here placed under *Rhynchodemus*, *Platydemus* (in part), *Microplana* (in part), and *Geopiana* (in part) in Geoplanidae. Cf. Ogren & Kawakatsu, Ms.

Rhynchodemus amboinensis von Graff, 1899

Rhynchodemus amboinensis n. sp. von Graff, 1899 : 499 ; taf. XV, figs. 25-26 (DB, DH in color). Amboina, Ambon Island/Indonesia.

Rhynchodemus amboinensis : du Bois-Reymond Marcus, 1955 : 34.

Rhynchodemus americanus Hyman, 1943

Rhynchodemus americanus n. sp. Hyman, 1943 : 6-9, figs. 9-12 (DB, HI, FCA). Greenhouses of Forest Park, St. Louis, Missouri and greenhouses at Riverton, New Jersey/U. S. A.

Rhynchodemus obscurus : de Beauchamp, 1930 a : 83.

Rhynchodemus ochroleucus von Graff, 1899

Rhynchodemus ochroleucus n. sp. von Graff, 1899 : 491-492 ; taf. XV, figs. 7-11 (DB, DH, VH, CP in color), XLIV, figs. 5-8 (HI in color), XLV, figs. 1-6 (HI in color). Natuna Island / Indonesia ; Mindanao Island / Philippines.

Rhynchodemus ochroleucus : Scharff, 1900 b : 35, 41.

Rhynchodemus ochroleucus : Sarasin & Sarasin, 1901 : 114.

Rhynchodemus ochroleucus : Bendl, 1908 a : 542-543, 551 ; taf. XXX, fig. 7 (FCA).

Rhynchodemus ochroleucus : Bendl, 1908 b : 308-309, 317 ; taf. XXX, fig. 7 (FCA).

Rhynchodemus ochroleucus : Bendl, 1909 a : 63.

Rhynchodemus ochroleucus : de Beauchamp, 1912 : X.

Rhynchodemus ochroleucus : von Graff, 1912 : 2630.

Rhynchodemus ochroleucus : von Graff, 1913 : 2748, 2755, 2789, fig. 33 (HI).

Rhynchodemus ochroleucus : von Graff, 1914 : 2907, 2956.
Rhynchodemus ochroleucus : von Graff, 1917 : 3365.
Rhynchodemus ochroleucus : Meixner, 1928 : 592.
Rhynchodemus ochroleucus : de Beauchamp, 1929 : 413.
Desmorhynchus ochroleucus : de Beauchamp, 1930 a : 81, 84, 87.
Rhynchodemus ochroleucus : Tu, 1940 : 219.
Rhynchodemus ochroleucus : Marcus, 1953 : 49.
Rhynchodemus ochroleucus : du Bois-Reymond Marcus, 1955 : 34, 36.
Rhynchodemus ochroleucus : Ogren, 1983 : 72.
Rhynchodemus ochroleucus : Ogren, 1986 : 179.

Rhynchodemus ochroleucus belli von Graff, 1899

Rhynchodemus belli n. sp. von Graff, 1899 : 504 ; taf. XVI, figs. 8-9 (DB, CP in color). Amboina, Ambon Island / Indonesia.
Desmorhynchus (Rhynchodemus) ochroleucus var. *belli* : Heinzel, 1929 : 439-441, 459 ; taf. 11, fig. 6 (FCA).

Rhynchodemus ochroleucus belli : de Beauchamp, 1952 : 51, 55.

Rhynchodemus ochroleucus var. *belli* : du Bois-Reymond Marcus, 1955 : 36.

Rhynchodemus ochroleucus varians von Graff, 1899

Rhynchodemus varians von Graff, 1899.

Desmorhynchos ochroleucus var. *varians* : de Beauchamp, 1930 a : 80-81, fig. 4 (DH). Kapala-Tjouroup, near Tjouroup, S. Sumatra / Indonesia.

Desmorhynchus ochroleucus varians : de Beauchamp, 1930 a : 85.

Rhynchodemus ochroleucus var. *varians* : du Bois-Reymond Marcus, 1955 : 36.

Rhynchodemus ochroleucus var. *varians* von Graff, 1899

See *Rhynchodemus ochroleucus varians* von Graff, 1899.

Rhynchodemus palmisius de Beauchamp, 1930

Rhynchodemus palmisius nom. nud. de Beauchamp, 1930 b : 721.

Note : de Beauchamp (1930 b) described 6 new rhynchodemid species from Palnis (Palni Hills Tamir Nadu), India. This nomen nudum seems to be a clerical error of one of his species.

Rhynchodemus pellucidus von Graff, 1899

Rhynchodemus pellucidus n. sp. von Graff, 1899 : 501 ; taf. XVI, figs. 5-6 (DB, CP in color). Blumenau, Santa Cattharina (Sta. Catarina) / Brazil.

Rhynchodemus pellucidus : de Beauchamp, 1913 a : 42.

Desmorhynchus (Rhynchodemus) pellucidus : Heinzel, 1929 : 438-439, 459 ; taf. 11, fig. 5 (FCA).
syn. ? of *Rhynchodemus blainvillei* von Graff, 1899.

Rhynchodemus pellucidus : Prudhoe, 1949 a : 429.

Rhynchodemus pellucidus : Marcus, 1952 : 72-74, 112-113, 164-167, pls. 21-22, figs. 126-129 (DB, HI, FCA). Blumenau, Sta. Catarina / Brazil.

Rhynchodemus pellucidus : du Bois-Reymond Marcus, 1953 : 72.

Rhynchodemus pellucidus : Marcus, 1953 : 49-50.

Rhynchodemus pellucidus : du Bois-Reymond Marcus, 1955 : 36.

Rhynchodemus pellucidus : Ball, 1977 : 506.

Rhynchodemus pellucidus : Ogren, 1986 : 178.

Rhynchodemus pellucidus : Ogren & Ball, 1989 (In press).

Rhynchodemus piptus Marcus, 1952

Rhynchodemus piptus n. sp. Marcus, 1952 : 74-76, 166-167, pl. 22, figs. 130-135 (DVB, DH, HI,

FCA). Butantan, São Paulo, S. P./Brazil.

Rhynchodemus piptus : Marcus, 1953 : 50, 54.

Rhynchodemus piptus : du Bois-Reymond Marcus, 1955 : 36.

Rhynchodemus piptus : Marcus, 1955 a : 121.

Rhynchodemus piptus : Marcus, 1955 b : 18.

Rhynchodemus piptus : du Bois-Reymond Marcus, 1965 : 135.

Rhynchodemus piptus : Ball, 1977 : 506.

Rhynchodemus piptus : Ogren, 1986 : 178.

Rhynchodemus putzei von Graff, 1899

Rhynchodemus putzei n. sp. von Graff, 1899 : 261, text-fig. 52 (FGO), 494 ; taf. XIV, figs. 1-2 (DH, VB in color), XLIV, figs. 1-4 (HI in color). Marquesas Island, Queensland/Australia.

Rhynchodemus putzei : Laidlaw, 1903 b : 579. Hulule, Male Atoll/Maldives (Maldives).

Rhynchodemus putzei : Bendl, 1908 a : 550, 552.

Rhynchodemus putzei : Bendl, 1908 b : 316, 318.

Rhynchodemus putzei : Bendl, 1909 a : 61.

Rhynchodemus putzei : von Graff, 1912 : taf. XXXVIII, fig. 12 (HI), XLVI figs. 21-22 (HI).

Rhynchodemus putzei : von Graff, 1913 : 2762, 2765.

Rhynchodemus putzei : von Graff, 1914 : 2920, 2934.

Rhynchodemus putzei : von Graff, 1915 : 3075.

Rhynchodemus putzei : Meixner, 1928 : 592.

Desmorphynchus putzei : Heinzel, 1929 : 459.

Rhynchodemus putzei : de Beauchamp, 1929 : 414.

Rhynchodemus putzei : Prudhoe, 1949 b : 251-253, figs. 4 a-b (DVB), 5 (FCA). Hivaoa, Matauna / Marques Islands.

Rhynchodemus putzei : du Bois-Reymond Marcus, 1955 : 31, 36.

Rhynchodemus putzei : Ogren, 1983 : 72.

Rhynchodemus putzei : Ogren, 1986 : 178.

Rhynchodemus pyrenaicus von Graff, 1893

See *Microplana howesi* (Scharff, 1900) ; *Microplana pyrenaica* (von Graff, 1893) ; *Rhynchodemus howesi* Scharff, 1900. Microplaninae. Cf. Ogren & Kawakatsu, Ms.

Rhynchodemus quadristriatus Grube, 1868

See *Playtdemus quadristriatus* (Grube, 1868).

Rhynchodemus rubrocinctus von Graff, 1899

Rhynchodemus rubrocinctus nom. nud. von Graff, 1897 : 113-114. N. Celebes/Indonesia.

Rhynchodemus rubrocinctus n. sp. von Graff, 1899 : 500 ; taf. XIX, figs. 44-46 (DB, CP in color). Minahassa and Bolaang, N. Celebes/Indonesia.

"*Rhynchodemus*" *rubrocinctus* : de Beauchamp, 1961 : pl. I, fig. 4 (DB in color).

Rhynchodemus samperi Fuhrmann, 1914

Rhynchodemus samperi n. sp. Fuhrmann, 1914 b : 786-788, figs. 29-33 (DH, CP, HI, FCA). Bogota and the vicinity of Zipaquirá, Sabana, Cordillères orientales (2650 m)/Colombia.

Rhynchodemus samperi : Fuhrmann, 1914 a : 453.

Rhynchodemus samperi : Meixner, 1928 : 592.

Desmorphynchus samperi (?) : Heinzel, 1929 : 459.

Desmorphynchus samperi : de Beauchamp, 1930 a : 83.

Desmorphynchus samperi : Hyman, 1941 : 10.

Rhynchodemus samperi : Prudhoe, 1949 a : 427, 429.

Rhynchodemus samperi : du Bois-Reymond Marcus, 1953 : 73.

Rhynchodemus samperi : Marcus, 1953 : 47, 49.

Rhynchodemus samperi : du Bois-Reymond Marcus, 1955 : 28, 36. Syn. ? of *Rhynchodemus hectori* von Graff, 1897.

Rhynchodemus samperi : du Bois-Reymond Marcus, 1965 : 135.

Rhynchodemus scharffi von Graff, 1896

See *Microplana scharffi* (von Graff, 1896). Microplaninae. Cf. Ogren & Kawakatsu, Ms.

Rhynchodemus schmardai von Graff, 1899

Rhynchodemus schmardai n. sp. von Graff, 1899 : 502 ; taf. XVI, figs. 17-19 (DB, CP in color).

Buitenzorg, Java/Indonesia.

Rhynchodemus schmardai : Bendl, 1908 a : 543-548, 551 ; taf. XXXI, figs. 1-3 (FCA, HI).

Rhynchodemus schmardai : Bendl, 1908 b : 309-314, 317 ; taf. XXXI, figs. 1-3 (FCA, HI).

Rhynchodemus schmardai : Bendl, 1909 a : 61, 72.

Rhynchodemus schmardai : von Graff, 1912 : 2630.

Rhynchodemus schmardai : von Graff, 1913 : 2807.

Rhynchodemus schmardai : Steinböck, 1925 : 185.

Rhynchodemus schmardai : Meixner, 1928 : 592.

Desmorphynchus schmardai : Heinzel, 1929 : 459.

Rhynchodemus schmardai : Corrêa, 1947 : 68.

Rhynchodemus schmardai : Marcus, 1953 : 49.

Rhynchodemus schmardai : du Bois-Reymond Marcus, 1955 : 37.

Rhynchodemus schmardai : Ogren, 1983 : 72.

Rhynchodemus schmardaei : Ogren, 1986 : 179. Spelling error.

Rhynchodemus schubarti du Bois-Reymond Marcus, 1955

Rhynchodemus schubarti n. sp. du Bois-Reymond Marcus, 1955 : 29-31 ; pl. 4, figs. 25-31 (DVB, DVH, CP, HI, FCA). Pirassununga, São Paulo, S. P./Brazil.

Rhynchodemus schubarti : du Bois-Reymond Marcus, 1965 : 135.

Rhynchodemus schubarti : Ogren, 1983 : 72.

Rhynchodemus schuberti : Ogren, 1986 : 179. Spelling error.

Rhynchodemus scius du Bois-Reymond Marcus, 1955

Rhynchodemus scius n. sp. du Bois-Reymond Marcus, 1955 : 31-34 ; pl. 5, figs. 32-38 (DVH, HI, FCA). Pirassununga, São Paulo, S. P./Brazil.

Rhynchodemus scius : Froehlich, 1955 a : 265.

Rhynchodemus scius : Froehlich, 1956 a : 314. Ubatuba, São Paulo/Brazil.

Rhynchodemus scius : du Bois-Reymond Marcus, 1965 : 135.

Rhynchodemus scius : E. M. Froehlich & Froehlich, 1972 : 30-34, fig. 4 (FCA). Pôrto Platon, Territória Federal do Amapá, the Amazonian Region/Brazil.

THE GENUS AND SPECIES ERRONEOUSLY DESCRIBED UNDER TRICLADIDA TERRICOLA

Genus *Nematodemus* von Graff, 1899

Nematodemus n. g. von Graff, 1896 : 72.

Type species: *Nematodemus lumbricoides* von Graff, 1899

Literature: von Graff, 1896 : 72 ; von Graff, 1899 : 513 ; Sarasin, 1910 : 44 ; von Graff, 1916 : 3230a ; Pantin, 1953 : 207-208, 217. Heteronemertea (Nemertinea, Anopla).

Nematodemus lumbricoides von Graff, 1899

Nematodemus lumbricoides n. sp. von Graff, 1896 : 72. nom. nud.

Nematodemus lumbricoides n. sp. von Graff, 1899 : 513 ; taf. XIV, figs. 12-13 (DH, CP in color).

Ceylon/Sri Lanka.

Nematodemus lumbricoides : Ikeda, 1911 : 122.

Nematodemus lumbricoides : von Graff, 1916 : 3230a.

Nematodemus lumbricoides : Pantin, 1953 : 207-208, 217. Heteronemertine.

Note: S. Prudhoe (British Mus., Nat. Hist.) confirmed this species is a marine Heteronemertine (cf. Pantin, 1953 : 207-208). Ogren also examined the species and confirmed it was a Nemertine when he visited the British Museum in the summer of 1985 (June 12, 1985). Cf. Gibson & Ogren, Ms.

* * * * *

The present Rhynchodeminae Index is continued in the Microplaninae Index (OGREN & KAWAKATSU, Ms.) which will be published in 1989.

In Microplaninae, *Dolichoplana voeltzkowi* VON GRAFF, 1899, and *Amblyplana Voeltzkowi* GEBA, 1909, are transferred into the same genus *Microplana* VEJDOKSKÝ, 1890. Thus, the latter must receive a new name (cf. MARCUS, 1953, p. 53, footnote 1) The following new name is proposed.

Microplana gebavoeltzkowi nom. nov.

Syn. *Amblyplana Voeltzkowi* GEBA, 1909. Type locality: Angasidga, Comoro Islands (Comoren)/Comores.

nec *Dolichoplana voeltzkowi* VON GRAFF, 1899. Type loc.: Nosy Be (Nossibé)/Madagascar.

* * * * *

On the generic names of *Caenoplana* MOSELEY, 1877, and *Coenoplana* MOSELEY, 1877.

In the original description of the genus *Caenoplana*, MOSELEY (1877, p. 285) used this spelling; he used linked type in printing diphthongs "ae". Three new species of this genus were also described on the same page and their generic name was printed as *Caenoplana*. The first species, which is now assigned as the type species, was printed as *Caenoplana coerulea*; a linked type "oe" was used in its specific name. MOSELEY's paper (*op. cit.*) included on page 289 a list of his new genus and three new species mentioned above and a non-identified species of the genus; he used the generic name *Coenoplana* printed by linked type "oe".

FLETCHER & HAMILTON (1888), who cited MOSELEY's (1877) genus, used both *Caenoplana* and *Coenoplana*; *Ca[e]noplana* was also found on page 351. Moreover, the specific name of the type

species was printed as both "coerulea" and "caerulea". DENDY (1890, 1891, 1895 a, b) used *Coenoplana*. But he (1891, p. 70) also used both *Geoplana coerulea* and *Geoplana caerulea*. All these old papers employed linked type in printing diphthongs "ae" and "oe".

As was noted in the International Code of the Zoological Nomenclature, 3rd Edition (ICZN, 1985; Appendix E, General Recommendations, 3), vowels linked together risked errors in later transcription. MOSELEY's (1877) original spelling of *Caenoplana* does not appear to be a *lapsus calami* of *Coenoplana*, because *Caenoplana* was the spelling first introduced on page 285 with the taxonomic description of his new genus and species. Perhaps printer's error can account for the second spelling of *Coenoplana* on page 289 where the genus and species are merely listed and on page 280 where *Coenoplana coerulea* is mentioned. In Latin "caen(o)" (*i.e.*, in general) and "coen(o)" (*i.e.*, common) have nearly the same meanings and both spellings can be used. There are some possibilities that "caeno" was formed from a Greek word "*καινός*" (kainós, *i.e.*, new or recent), which appears as a more logical etymology, and "coeno" was formed from a "*κοινός*" (koinós, *i.e.*, common). In this case the meanings of both words are different. MOSELEY's (1877) new genus "*Coenoplana*" was placed as a junior synonym of the genus *Geoplana* STIMPSON, 1857, by DENDY (1890, p. 51). This classification was also employed by VON GRAFF (1899) and the following specialists of land planarians (cf. WOOD, 1926; WINSOR, 1979) except for FROEHLICH (1955) and JONES (1987, 1989). The selection of the correct spelling has recently become important since the genus is no longer considered synonymous with *Geoplana* and is thus taxonomically available (cf. FROEHLICH, 1955; OGREN, 1989 Abstract; OGREN & KAWATSU, 1988).

Additionally, the specific name "coerulea" was employed by MOSELEY (1877, pp. 285, 289). In Latin "coeruleus" (=caeruleus) means a deep blue coloration (*κίανος* in Greek). MOSELEY (*op. cit.*, p. 285) wrote: "Entire body of a dark Prussian blue colour, somewhat lighter on the undersurface of the body and with a single, narrow, medial, dorsal, longitudinal stripe of white". Although the specific name "caerulea" is sometimes found in literature for MOSELEY's (1877) species of *Caenoplana coerulea*, it seems to be a *lapsus calmi* of "coerulea". Since these names indicate the same species, they are not deemed to be homonyms (ICZN, Art. 58 (1); see also Art. 32 (c) (ii)).

There is no evidence of an inadvertent error for the generic name *Caenoplana* (ICZN, Art. 32). Moreover, in our opinion, neither DENDY (*op. cit.*), nor VON GRAFF (*op. cit.*) qualify as first revisors (ICZN, Art. 24 (c)) in the strict meaning. Therefore, the present recommendation appears desirable. Thus, the genus name *Caenoplana* MOSELEY, 1877 (p. 285) has the priority over *Coenoplana* MOSELEY, 1877 (p. 289) (cf. ICZN, Art. 24, Recommendation 24 A). For this reason, the following proposal is given.

Genus *Caenoplana* MOSELEY, 1877

Definition. See MOSELEY (1877, p. 285).

Type species. *Caenoplana coerulea* MOSELEY, 1877.

Synonyms of the genus and species:

Coenoplana; *Coenoplana caerulea*; *Geoplana coerulea*; *Geoplana caerulea*.

* * * * *

Many species originally described under several genera (*Microplana*, *Planaria*, *Platydemus*, *Rhynchodemus*, etc.) are now transferred into various genera of Rhynchodeminae or Microplaninae. Readers can discover the present taxonomic status of every known rhynchodemid species according to the following taxonomic indices of Rhynchodeminae and Microplaninae.

The necessary references for the Rhynchodeminae Index will be added at the end of the Microplaninae Index when it is published.

- waburtonianus*...see under *Rhynchodemus*. Rhynchodeminae.
- whiteleggei*...see under *Cotyloplana*. Rhynchodeminae. Type species of the genus *Cotyloplana* Spencer, 1892.
- zimmermanni* or *Zimmermanni*...see under *Platydemus*. Rhynchodeminae.

TAXONOMIC INDEX : MICROPLANINAE

- aberana*...see under *Microplana*, *Amblyplana*. Microplaninae.
- africanum* or *africanus*...see under *Othelosoma*, *Artiocotylus*, *Platydemus*. Microplaninae.
- albicolis*...see under *Microplana*, *Orthodemus*, *Rhynchodemus*. Microplaninae.
- anamallensis*...see under *Incapora*, *Rhynchodemus*. Microplaninae.
- angolense*...see under *Othelosoma*, *Artiocotylus notabilis* var. *angolensis*. Microplaninae.
- atrocyanea* or *atrocyaneus*...see under *Microplana*, *Geodesmus*, *Rhynchodemus*. Microplaninae.
- atropurpurea* or *atropurpureus*...see under *Microplana*, *Platydemus*, *Rhynchodemus*. Microplaninae.
- attemsi*...see under *Microplana*, *Diporodemus*, *Rhynchodemus*. Microplaninae.
- braueri*...see under *Amblyplana*, *Pelmatopiana*. Microplaninae.
- britannica* or *britannicus*...see under *Microplana*, *Rhynchodemus*. Microplaninae.
- caffrum* or *caffra*...see under *Othelosoma*, *Amblyplana*, *Artiocotylus*. Microplaninae.
- capense* or *capensis*...see under *Othelosoma*, *Amblyplana*. Microplaninae.
- carli*...see under *Microplana*, *Rhynchodemus*. Microplaninae.
- ceylonica* or *ceylonicus*...see under *Microplana*, *Rhynchodemus*. nec *Pseudartiocotylus ceylonicus* Ikeda, 1911. Microplaninae.
- ceylonicus*...see under *Pseudartiocotylus*. nec *Rhynchodemus ceylonica* von Graff, 1899. Microplaninae. Type species of the genus *Pseudartiocotylus* Ikeda, 1911.
- cherangani*...see under *Microplana*, *Artiocotylus*. Microplaninae.
- chinum*...see under *Othelosoma*. Microplaninae.
- cockerelli*...see under *Microplana*, *Amblyplana*, *Geodesmus*. Microplaninae.

- conyum*...see under *Othelosoma*. Microplaninae.
costaricensis...see under *Microplana*, *Rhynchodemus*.
 Microplaninae.
cylindricum or *cylindrica*...see under *Othelosoma*, *Amblyplana*, *Artiocotylus*. Microplaninae.
decennii...see under *Microplana*, *Rhynchodemus*. Microplaninae.
ehrenbergi...see under *Amblyplana*. Microplaninae.
flavescens...see under *Othelosoma*, *Amblyplana*, *Artiocotylus*. Microplaninae.
fuliginea...see under *Amblyplana*. Microplaninae.
fuscum or *fuscus* or *fusca*...see under *Othelosoma*, *Amblyplana*, *Rhynchodemus*. Microplaninae. Type species of the genus *Amblyplana* von Graff, 1896.
gebavoeltzkowi...see under *Microplana*. Microplaninae.
 See also the Rhynchodeminae Index, p. 85.
giustii...see under *Microplana*. Microplaninae.
gnaum...see under *Othelosoma*. Microplaninae.
graffi or *Graffi*...see under *Microplana*, *Amblyplana*, *Rhynchodemus*. Microplaninae.
gravelyi...see under *Othelosoma*, *Rhynchodemus*. Microplaninae.
haeckeli...see under *Amblyplana*. Microplaninae.
haiiensis...see under *Microplana*, *Geodesmus*. Microplaninae.
harea...see under *Microplana*. Microplaninae.
henrici...see under *Microplana*, *Rhynchodemus*. Microplaninae.
hepatica...see under *Fasciola*. *Dendrocoelum lacteum* (Müller, 1774). Paludicola or Probursalia. Type species of the genus *Fasciola* Müller, 1774.
hepaticarum...see under *Othelosoma*, *Amblyplana*, *Artiocotylus*. Microplaninae. Type species of the genus *Fasciola* Linné, 1758.
hirudineum or *hirudineus*...see under *Othelosoma*, *Rhynchodemus*. Microplaninae.
hovassei or *Hovassei*...see under *Microplana*, *Rhynchodemus*. Microplaninae.
howesi or *Howesi*...see under *Microplana*, *Rhynchodemus*. Microplaninae.
humicola...see under *Microplana*, *Rhynchodemus*, *Rhynchodemus* (*Microplana*). Microplaninae. Type species of the genus *Microplana* Vejdovský, 1890.
hustum...see under *Othelosoma*. Microplaninae.
hymanae...see under *Diporodemus*. Microplaninae.
indica...see under *Microplana*, *Orthodemus*. Microplaninae.
indigenus...see under *Diporodemus*. Microplaninae.
knysensis...see under *Amblyplana*. Microplaninae.
kuekenthali or *kükenthali*...see under *Amblyplana*. Microplaninae.
kukkal...see under *Othelosoma*, *Rhynchodemus*. Microplaninae.
macrothylax...see under *Othelosoma*, *Artiocotylus*. Microplaninae.
maheensis or *mahéensis*...see under *Amblyplana*, *Peltomatoplana*. Microplaninae.
mahnerti...see under *Microplana*. Microplaninae.
marcusi...see under *Othelosoma*. Microplaninae.
marlieri...see under *Othelosoma*. Microplaninae.
mediostriata or *mediostriatus*...see under *Microplana*, *Amblyplana*, *Rhynchodemus*. Microplaninae.
monacensis...see under *Microplana*, *Diporodemus*, *Rhynchodemus*. Microplaninae.
montoyai or *montoyae*...see under *Microplana*, *Amblyplana*, *Geodesmus*, *Rhynchodemus*. Microplaninae.
musculosum or *musculosus*...see under *Othelosoma*, *Diporodemus*, *Rhynchodemus*. Microplaninae.
natalensis...see under *Microplana*, *Amblyplana*, *Rhynchodemus*. Microplaninae.
neumannni...see under *Microplana*, *Amblyplana*, *Othelosoma*, *Rhynchodemus*. Microplaninae.
nigrescens...see under *Othelosoma*, *Amblyplana*, *Artiocotylus*, *Microplana*. Microplaninae.
notabile or *notabilis*...see under *Othelosoma*, *Amblyplana*, *Artiocotylus*, *Rhynchodemus*. Microplaninae.
notabilis var. *angolensis*...see under *Othelosoma angolense*, *Artiocotylus*. Microplaninae.
peneckei...see under *Microplana*, *Rhynchodemus*. Microplaninae.
perereca...see under *Microplana*. Microplaninae.
plenus...see under *Diporodemus*. Microplaninae.
polecatum...see under *Othelosoma*. Microplaninae.
pugum...see under *Othelosoma*. Microplaninae.
purpurea or *purpureus*...see under *Microplana*, *Rhynchodemus*. Microplaninae. nec *Geoplana purpurea* Dendy, 1895; nec *Caenoplana purpurea* (Dendy, 1895). Cf. Jones (1987, p. 57; 1989).
pyrenaica or *pyrenaicus*...see under *Microplana*, *Rhynchodemus*. Microplaninae.
retractile or *retractilis*...see under *Othelosoma*, *Rhynchodemus*. Microplaninae.
richardi...see under *Microplana*, *Rhynchodemus*. Microplaninae.
ruca...see under *Geoplana* (Geoplanidae), *Microplana*.
rudebecki...see under *Othelosoma*. Microplaninae.
rufoccephalata...see under *Microplana*. Microplaninae.
ruteocephala or *ruteocephalus*...see under *Microplana*,

- Rhynchodemus*. Microplaninae.
saegeri...see under *Othelosoma*. Microplaninae.
scharffi or *Scharffi*...see under *Microplana*, *Rhynchodemus*.
 Microplaninae.
sholanum or *sholanus*...see under *Othelosoma*, *Rhynchodemus*. Microplaninae.
sholanus var. *uniductus*...see under *Othelosoma sholanum uniductus*, *Rhynchodemus sholanus* var. *uniductus*, *Microplana uniductus*. Microplaninae.
sondaica ... see under *Geoplana*. Geoplanidae. Type species of the genus *Pelmatopla* von Graff, 1896.
speciosum or *speciosus*...see under *Othelosoma*, *Amblyplana*, *Artiocotylus*. Microplaninae. Type species of the genus *Artiocotylus* von Graff, 1896.
styriaca or *styriacus*...see under *Microplana*, *Rhynchodemus*. Microplaninae.
symondsi or *Symondsii* or *symondsi* or *Symondsi*...see under *Othelosoma*. Microplaninae. Type species of the genus *Othelosoma* Gray, 1869.
teres...see under *Microplana*, *Amblyplana*, *Rhynchodemus*. Microplaninnae.
terrestris...see under *Microplana*, *Fasciola*, *Fasciola (Rhynchodemus)*, *Geodesmus*, *Geoplana (Planaria)*, *Orthodemus*, *Planaria*, *Rhynchodemus*, *Rhynchodemus (Orthodemus)*. Microplaninae. Type species of the genus *Orthodemus* Hyman, 1954.
tetracladea or *tetracladeus*...see under *Microplana*, *Amblyplana*, *Rhynchodemus*, *Rhynchodemus (Amblyplana)*. Microplaninae.
thwaitesii or *Thwaitesii* or *thwaitesi*...see under *Microplana*, *Platydemus*, *Rhynchodemus*. Microplaninae.
torquatum or *torquatus*...see under *Othelosoma*, *Rhynchodemus*. Microplaninae.
trifuscolineata or *trifuscolineatus*...see under *Microplana*, *Amblyplana*, *Rhynchodemus*. Microplaninae.
tristriata or *tristriatus*...see under *Microplana*, *Amblyplana*, *Rhynchodemus*. Microplaninae.
tyrrhenica ... see under *Geobenazzia*. Microplaninae. Type species of the genus *Geobenazzia* Minelli, 1974.
uniductus...see under *Othelosoma sholanum uniductus*, *Microplana*, *Rhynchodemus sholanum* var. *uniductus*. Microplaninae.
unilineata or *unilineatus*...see under *Microplana*, *Rhynchodemus*. Microplaninae.
viridis...see under *Microplana*, *Amblyplana*, *Rhynchodemus*, *Rhynchodemus (Amblyplana)*. Microplaninae.
voeltzkowi von Graff, 1899...see under *Microplana*, *Dolichopla*, *Othelosoma*, *Rhynchodemus*. nec *Amblyplana Voeltzkowi* Geba, 1909. Microplaninae.
voeltzkowi or *Voeltzkowi* Geba, 1909...see under *Microplana gebavoeltzkowi*, *Microplana*, *Amblyplana*. nec *Dolichopla voeltzkowi* von Graff, 1899. Microplaninae.
voleum...see under *Othelosoma*. Microplaninae.
wauzen...see under *Othelosoma*. Microplaninae.
weyrauchi...see under *Incapora*. Microplaninae. Type species of the genus *Incapora* du Bois-Reymond Marcus, 1953.
yaravai...see under *Microplana*. Microplaninae.
yucatani...see under *Diporodemus*. Microplaninae. Type species of the genus *Diporodemus* Hyman, 1938.
zenkeri...see under *Amblyplana*. Microplaninae.
