A LIST OF PUBLICATIONS ON TURBELLARIANS RECORDED FROM LAKE BIWA-KO, HONSHÛ, JAPAN

by

MASAHIRO KAWAKATSU and MACHIKO NISHINO

A SHORT HISTORY OF THE STUDY OF TURBELLARIANS IN LAKE BIWA-KO

Lake Biwa-ko, located in the Kinki Region, the central part of Honshû, is the largest lake in Japan. Approximately 63.5 km long and 22.8 km wide, it has a 235.2-km shoreline, a 607.4-km² area, and a maximum depth of 103.6 m (an elevation of the surface of the lake, 85.6 m) (cf. Environ. Div. Shiga Pref. Govern., 1991; Geogr. Survey Inst., 1992; data in HORIE, 1984, are insufficient).

In 1915, the first turbellarian species from Lake Biwa-ko was collected by Dr. T. N. ANNANDALE (Indian Museum of Calcutta), who visited the Ōtsu Hydrobiological Station, and Prof. T. KAWAMURA of Kyôto Imperial University (cf. ANNANDALE, 1922). Their dredged sample of a deep-lake-dwelling planarian was described by IJIMA & KABURAKI (1916) under the name of *Bdellocephala annandalei*; this new species was redescribed by KABURAKI (1922). *Bd. annandalei* is known as a large, endemic triclad inhabiting in Lake Biwa-ko (cf. KAWAKATSU, 1991, p. 390; see also HARADA, 1984).

The distribution of *Bdellocephala annandalei* was reported by KAWAKATSU (1964) and KAWAKATSU, ÔGAWARA & TARUI (1967). From the comparison of the population density of benthonic planarians, *Bd. annandalei* in Lake Biwa-ko, Japan, and *Phagocata tahoena* KAWAKATSU, 1968 (olim *Phagocata nivea tahoena*), and *Dendrocoelopsis hymanae* KAWAKATSU, 1968, in Lake Tahoe in the Sierra Nevada Mountains in North America, KAWAKATSU (1965) considered that the food supply would be one of the main factors that control the density of lake-dwelling planarians (see also KAWAKATSU, 1967, p. 161). GOSE (1966) reported on the food-cycle of this benthonic species; he demonstrated from his microscopic examinations of squashed live specimens of *Bd. annandalei* that the aquatic earthworm (*Tubifex* sp.) inhabiting at the muddy bottom of the Lake seemed to be the main food of planarians.

Lake Yogo-ko (alt. 134 m, 1.6-km² area, maximum depth 14.5 m) is a small lake. It is located close by the northernmost part of Lake Biwa-ko. The Yogo River fed by Lake Yogo-ko runs into Lake Biwa-ko. *Bdellocephala annandalei* was not found in Lake Yogo-ko (cf. MURAYAMA, TAKAHASHI & KAWAKATSU, 1974).

TESHIROGI, YAGIHASHI & ISHIDA (1982) reported on the distribution, the cytological observation and the regeneration ability of *Bdellocephala annandalei*. According to them, the chromosome numbers of this species are $n = 14$ and $2n = 28$; the karyotype consists of 5 pairs of metacentric chromosomes (of which the first pair is very large), 7 pairs of submetacentric chromosomes, and 2 pairs of subtelocentric chromosomes (cf. TESHIROGI, YAGIHASHI & ISHIDA, 1982, pp. 46-47, fig. 10A). In their Japanese paper cited here, they emphasized the occurrence of another benthonic species, *Bdello-*

cephala sp., of a small size in sexually mature condition having a slightly rounded type of a head. Although they considered that it was a new species, the taxonomic position of their animals is not yet determined (KAWAKATSU, Ms.).

NISHINO (1993 a, b) and NISHINO & HARADA (1993) studied an annual change of the population density of some benthonic animals of Lake Biwa-ko during the last 15 years or more (1978-1992). It has become clear from the result of 1991-1992 survey that *Bdellocephala annandalei* is now very rare especially in the northern deep area of the Lake (Pl. III). They (*op. cit.*) emphasized that this endemic triclad species was now on the extinction due to an uncertain change of some environmental factors in the deep layer of the Lake.

Among the animals of triclad turbellarians, KAWAKATSU (1966, p. 57, figs. 11-12) reported a non-described species from the deep bottom off the Tsuzurao-zaki Cape in the northern part of Lake Biwa-ko: *Dendrocoelopsis?* sp. of Lake Biwa-ko (see also KAWAKATSU, 1978; KAWAKATSU, ÔGAWARA & TARUI, 1967). This undescribed, pale brown colored species with 2 eyes is 25 mm in length and 4 mm in width and without an adhesive organ or sucker at the antero-ventral portion of the head (slides of 2 samples collected were lost).

In many lakes in Japan, occurrence of triclad is usually rare at the shore of lakes located in plains and lowland areas. TSUDA (1945) reported a small population of a common dugesiid species from a shallow sand-and-stone beach of the southwestern part of Lake Biwa-ko; the species is undoubtedly *Dugesia japonica* ICHIKAWA et KAWAKATSU, 1964 (cf. KAWAKATSU, ÔGAWARA & TARUI, 1967, p. 114, fig. 2). *D. japonica* is common in many stations of rivers, narrow streams and springs at the vicinity of the Lake. *Phagocata vivida* (IJIMA et KABURAKI, 1916) is also found in some cold-water stations in the Hira Mountains located at the western side of the Lake (cf. KAWAKATSU, ÔGAWARA & TARUI, 1967, p. 113, fig. 1).

Occurrence of the other group of turbellarian animals was first recorded by KAWAMURA (1918) under the name of *Caridinicola indica* (sic). This is an ectoparasitic temnocephalid species, *Scutariella indica* (ANNANDALE, 1912) (olim *Caridinicola indica*; nec *Paracaridinicola indica* (PLATE, 1914)), and is found from a branchial chamber of a freshwater shrimp, *Paratya compressa compressa* (DE HANN) (olim *Xiphocaridina compressa*) from Lake Biwa-ko. This temnocephalid species belongs in the genus *Scutariella* MRÁZEK, 1907, the subfamily Scutariellinae BAER, 1931, the family Scutariellidae ANNANDALE, 1912, the suborder Scutariellidata BAEA, 1953, the order Temnocephalida (cf. KAWAKATSU, NUNOMURA & SUZUKI, 1989). KOBAYASHI (1935) reported on the morphology, reproduction and ecology of *S. indica* from the Lake. HONJÔ (1937) published a detailed biological descriptions (including morphology and regeneration ability) of the same temnocephalid species from the Lake.

Since early 1970's, the quantitative study of microfossils remained in the core samples of Lake Biwa-ko has been carried out by several limnobiologists of the HORIE's team. KADOTA (1973) reported the fossil egg capsules, or cocoons, of Turbellaria in a 170-meter core taken from the bottom of Lake Biwa-ko (the numbers of cocoons detected from the core sample attained 3975). The further results of Dr. KADOTA's studies were published in 1974, 1975, 1976, 1984, 1987, and 1991. A photomicrograph of his turbellarian egg capsule is printed in his 1974 paper (p. 244, pl. III, top-right); it may be a broken cocoon because it shows a punch cup shape (see also KADOTA, 1991, p. 206, fig. 86). The identification of the species that laid fossil cocoons is impossible (cf. KAWAKATSU, 1973, p. 59).

The present publication is designed to secure the various informations on turbellarians from Lake Biwa-ko, most of which are related to *Bdellocephala annandalei*. Every literature is classified according to the alphabetical order of the authors' names. We have added the English titles to the Japanese papers which have none in any foreign language. Explanately notes were given for some

literature. For the citation of original figures in each paper, the following abbreviations are employed: DB, dorsal view of the body; DH, dorsal view of the head; DVB, dorsal and ventral views of the body; DVH, dorsal and ventral views of the head; FCA, schematic figure of the copulatory apparatus; FGO, schematic figure of the genital organ; HI, histological figures; PCA, photographs of the copulatory apparatus.

Photographs and sketches of several turbellarian species of Lake Biwa-ko reproduced from previous papers (HONJŌ, 1937; IJIMA & KABURAKI, 1916; KABURAKI, 1922; KADOTA, 1973; KAWAKATSU, 1967; MURAYAMA & KAWAKATSU, 1973; OKUGAWA, 1930) are shown in Plates I and II (Figs. A-P). A distribution map of planarians in the Lake is shown in Plate III. A detailed taxonomic redescription of *Bdellocephala annandalei* will be published in near future (KAWAKATSU, Ms.).

A LIST OF PUBLICATIONS

Annandale, N., 1922. The macroscopic fauna of Lake Biwa. *Annot. Zool. Japon.*, 10: 127-153.

Note. *Bdellocephala annandalei* (Turbellaria) and *Caridinicola* sp. (Temnocephaloidea): pp. 131, 150.

The Asahi (Asahi-Shinbun), 1986. [The scene of the deepest area of Lake Biwa-ko caught by the Asahi TV Camera: The endemic planarian, *Bdellocephala annandalei*, is common at the depth of 104 meters off the mouth of the Adogawa River, the west-side of the lake]. The Asahi, Ōsaka Ed., April 18, 1986 (Tuesday). (Jap.) 朝日新聞. とらえた琵琶湖最深部 ロボット探査 104 メートル エビも住む. 大阪本社版, 昭和61年4月8日(火曜日)の記事.

Note. *Bdellocephala annandalei*: The photograph shows several live specimens found on the surface of a round stone located at the deepest point of the Lake.

Fujitsuna, T., 1915. [Biogeographical notes of organisms in Lake Biwa-ko, No. 22. Leechs, planarians, etc.]. *Saiensu*, Kyōto, 5 (11): 467-471. Published by Shimazu Co., Kyōto. (Jap.) 藤綱藤太郎. 琵琶湖上の生物地理 (22). 第7章 琵琶湖産蠕形動物其他. 1. 琵琶湖に見らるゝ蛭類. サイエンス, 5卷, 11号, 467-471頁. 島津製作所, 京都.

Note. Freshwater planaria (*Planaria*) collected from the lake shore is listed (p. 471). The species may be *Dugesia japonica*.

Gose, K., 1966. Food habit of *Bdellocephala annandalei* of Lake Biwa. *Jap. Jour. Ecol.*, 16: 76-79. (Jap.) 御勢久右衛門. 琵琶湖産 *Bdellocephala annandalei* の食性について. 日本生態学会誌, 16卷, 76-79頁.

Note. No English summary is given in this paper. According to Dr. Gose, *Tubifex* species seems to main food of *Bdellocephala annandalei*. Cf. Kawakatsu (1967, p. 161).

Harada, E., 1984. Benthos. In: Horie, S. (ed.), Lake Biwa, pp. 323-330. Dr. W. Junk Publishers, Dordrecht.

Note. *Dugesia japonica* and *Bdellocephala annandalei*: These two species are listed in the group of Plat-

helminthes-Turbellaria-Tricladida.

Honjō, I., 1937. Physiological studies on the neuromuscular systems of lower worms. I. *Caridinicola indica*. *Mem. Coll. Sci., Kyōto Imp. Univ.*, B, XII, (2): 187-210+pl. XIII.

Note. The material was collected from Lake Biwa-ko. A detailed morphology of this species is given in the present paper (see pl. I, fig. (DB, HI)).

Horie, S. (ed.), 1972. Paleolimnology of Lake Biwa and the Japanese Pleistocene. First Ed. Contribution on the "Paleolimnology of Lake Biwa and the Japanese Pleistocene", (7): 1-93.

Note. This publication was a distribution material for the participants of the International Congress of Limnology. It includes short data about the fossil turbellarians (p. 79, table 1; p. 83, fig. 6, 1-3; p. 85, fig. 13).

Horie, S. (et al.), 1972. [Paleolimnological survey of Lake Biwa-ko]. Abstracts of papers given at the 37th Ann. Meet of the Jap. Soc. of Limnology held in Sapporo, on Sept. 15-17, 1972, pp. 26-29. (Jap.) 堀江正治 (他). 過去70万年間の琵琶湖の古陸水. 日本陸水学会第37回大会 (札幌, 昭和47年9月15~17日) プログラム・講演要旨, シンポジウムIII, 26-29頁.

Note. Dr. S. Kadota, a member of this team, showed several photographs of the fossil cocoons of turbellarians obtained from the bottom-core samples of Lake Biwa-ko.

Hyman, L. H., 1953. North American Triclad Turbellaria. 14. A new, probably exotic, dendrocoelid. *Amer. Mus. Novitates*, (1629): 1-6.

Note. *Bdellocephala annandalei*: p. 5.

Addresses of the Authors :

Dr. Masaharu KAWAKATSU, Professor of Biology, Biological Laboratory, Fuji Women's College, Kita-16, Nishi-2, Kita-ku, Sapporo (Hokkaidô) 001, Japan.

Dr. Machiko NISHINO, Senior Researcher, Lake Biwa Research Institute, 1-10 Uchidahama, Ôtsu 520, Japan.

EXPLANATION OF PLATES I-III

Plates I and II

A-F: *Bdellocephala annandalei* IJIMA et KABURAKI, 1916. A, live specimen (photo by Mr. H. MURAYAMA); B, preserved specimen; C, woodcut figure (after IJIMA & KABURAKI, 1916); D, color painting (after KABURAKI, 1922); E, sucker (after IJIMA & KABURAKI, 1916; a part of the original figure is damaged); F, sucker (after KABURAKI, 1922).

G and H: *Dendrocoelopsis?* sp. of Lake Biwa-ko (after KAWAKATSU, 1967). G, sketch of a live specimen; H, enlarged photograph of the head of a live specimen.

I and J: Schematic figures of the copulatory apparatus of *Bd. annandalei*. I, after IJIMA & KABURAKI (1916); J, after KABURAKI (1922). Abbreviations of new terms were used. bc, bulbar cavity; bs, bursal stalk; cb, copulatory bursa; cod, common oovitelline duct; gp, genital pore; ma, male genital antrum; od, oovitelline duct; p, penis; sd, sperm duct.

K-O: Several microturbellarians from Lake Biwa-ko (after OKUGAWA, 1930). K and L, *Macrostomum gigas* OKUGAWA, 1930; M, *Macrostomum kawamurai* OKUGAWA, 1930; N, *Macrostomum japonicum* OKUGAWA, 1930; O, *Plagiostomum lemani* (PLASSIS, 1874). Abbreviations were changed. br, brain; ch, chitinous penis; e, eye; o, ovary; ph, pharynx; t, testis.

P: *Scutariella indica* (ANNANDALE, 1912) (after HONJÔ, 1937). Terms in the original figure are shown by abbreviations. an, anterior nerve; br, brain; e, eye; ec, excretory canal; ep, excretory pore; go, genital opening; i, intestine; ln, lateral nerve; m, mouth; o, ovary; ov, oviduct; pe, penis; ph, pharynx; su, sucker; t, testis; te, tentacle; to, terminal organ; vd, vas deferens; vg, vitelline gland; vn, ventral nerve; vs, vesicula seminalis.

Q: The fossil egg capsule of Turbellaria (the pencil sketch reproduced from the photomicrograph of KADOTA's 1973 paper, pl. II).

Plate III

A map of Lake Biwa-ko, showing the distribution record of planarians (modified from KAWAKATSU, 1964; KAWAKATSU, ÔGAWARA & TARUI, 1967; TESHIROGI, YAGIHASHI & ISHIDA, 1982—exclusive of the records of *Bdellocephala* sp.—; NISHINO, 1993 a). Arrow indicates the stations where *Bdellocephala annandalei* were collected in the 1991–1992 survey (based upon the map by NISHINO, 1993 a, p. 17, fig. 16). 1, Chikubu-jima Island; 2, Takei-jima Island; 3, Shiraishi-jima Island; 4, Oki-no-shima Island.

Plate IV

The Landsat image of Lake Biwa-ko and the vicinities (photos by the Landsat, NASA).

Plate V

Top: The northwestern part of Lake Biwa-ko and the snow-covered Hira Mountains (photo by Dr. H. FUSHIMI). An artificial structure of the left-bottom corner is an "Eri" (fixed-net traps; a special fishing method commonly used around the Lake).

Bottom: The northwestern part of Lake Biwa-ko (a town of the Kosei area) and the Hira Mountains (photo by Dr. H. FUSHIMI).

December 25, 1993.
